WELCOME

Welcome to the Tarpaflex brochure which has comprehensive details on the widest range of ready made tarpaulins available in the UK.

We are a family owned business established in 1992 with over 30 years experience in the trade. We are firmly placed as a leading importer and distributor of tarpaulins, dust sheets, hessian rolls, one tonne bags, poly rope and other associated ranges, which includes a comprehensive range of debris netting, privacy netting and scaffold sheeting. We have over 200 different variations of size, colour and specification available of our prefabricated polyethylene tarpaulins. Located on an eight-acre site in the beautiful Devon countryside, we distribute our products the length and breadth of the British Isles and into Ireland.

All stock is imported by us and stored on our own premises. We process, pack and despatch your order here in Devon, England and are proud to offer friendly, professional advice and assistance by phone or email. As a family owned business, our customers are extremely important to us and, as a result, we are firmly committed to meeting your needs in everything we do.

Please contact us by phone on **01409 221192** or email **sales@tarpaflex.co.uk** if you would like to discuss any of our product range.

We hope we can be of service to you in the near future.

GENERAL INFORMATION

Our delivery options are:

Express (1-2 Working Days)
 Next Working Day by 10:30am
 Next Working Day by 12pm
 Standard (3-4 Working Days)
 Economy (4-7 working days)
 Saturday Delivery

Please contact us or visit our website for prices.

We may not be able to provide the above delivery options to locations outside of Mainland UK.

Orders must be placed by 3.30pm Monday-Friday in order to be dispatched on the same day.

We also offer a click and collect service from our site here in Devon. **Please contact us beforehand and payment must be made prior to collection.**

Our Carriers

We use third-party carriers such as **Evri, Royal Mail, UPS, FedEx DPD** and **Parsons** for our deliveries. Each offers a comprehensive tracking service via text or email, to include notification of delivery slot on the morning of your delivery. Please make sure your correct contact details are on your order and add any delivery instructions to help the driver locate your property and any safe place the goods can be left.

General delivery times are **8.00am to 6.00pm Monday to Friday**. However some couriers do operate outside of these times, especially during busy periods like Christmas.

Payment Options

We accept all major debit/credit cards (**Visa, Mastercard, American Express, Switch/Maestro, & Delta**), as well as **PayPal, Klarna, Google Pay**.

If you are a limited company, please contact our Sales Office where we would be happy to discuss account facilities with you.

If you are a government department, council, school or any other government agency, we can automatically invoice you on a 30 day account. We require an official purchase order with an order number and correct invoicing and delivery details.

Returns

All our products are guaranteed to be free from any defect at the time of purchase. If an item is found to be faulty upon receipt, we will refund or replace the product without charge. In such instances we will always request that an image of the fault is sent through first for us to assess; this is the quickest and most efficient way for us to resolve any customer issues.

If you wish to return an unused item within 28 days of purchase, please request a Returns form from us at **sales@tarpaflex.co.uk**.

When purchasing a tarpaulin it can be tricky to know what size to go for, and what grade is required for more information please contact our Sales Office on **01409 221 192**.

Size Guide

Before you buy your tarpaulin, it is important to remember that unless specifically stated as a finished size, the sizes stated refer to the cut size of the sheet; this is the industry-standard terminology to indicate the size of the fabric before it is seamed, hemmed and eyeleted. As a result, the finished size of a tarpaulin can be up to 30cms shorter. It is therefore important to allow for such a possible shortfall.

If you are working to particularly tight dimensions then it is worth opting for a larger size.

Visit our website or scan the QR code to view our size guide for a full listing of our tarpaulins in order of size and grade, or use our handy size finder tool.

**SCAN FOR
SIZE GUIDE**

Which grade should you go for?

Our tarps are measured in GSM (Grams per Square Metre), which relates to the weight of the material a tarpaulin is manufactured from. In terms of the grades of tarpaulins we can supply, our range is from **80gsm** up to **560gsm**. We do not offer a guarantee to the lifespan of any of our products because of the huge variety of applications they can be put to; however as a general rule, the heavier the grade of tarpaulin, the more durable it can be expected to be.

BUDGET 70GSM TARPAULINS

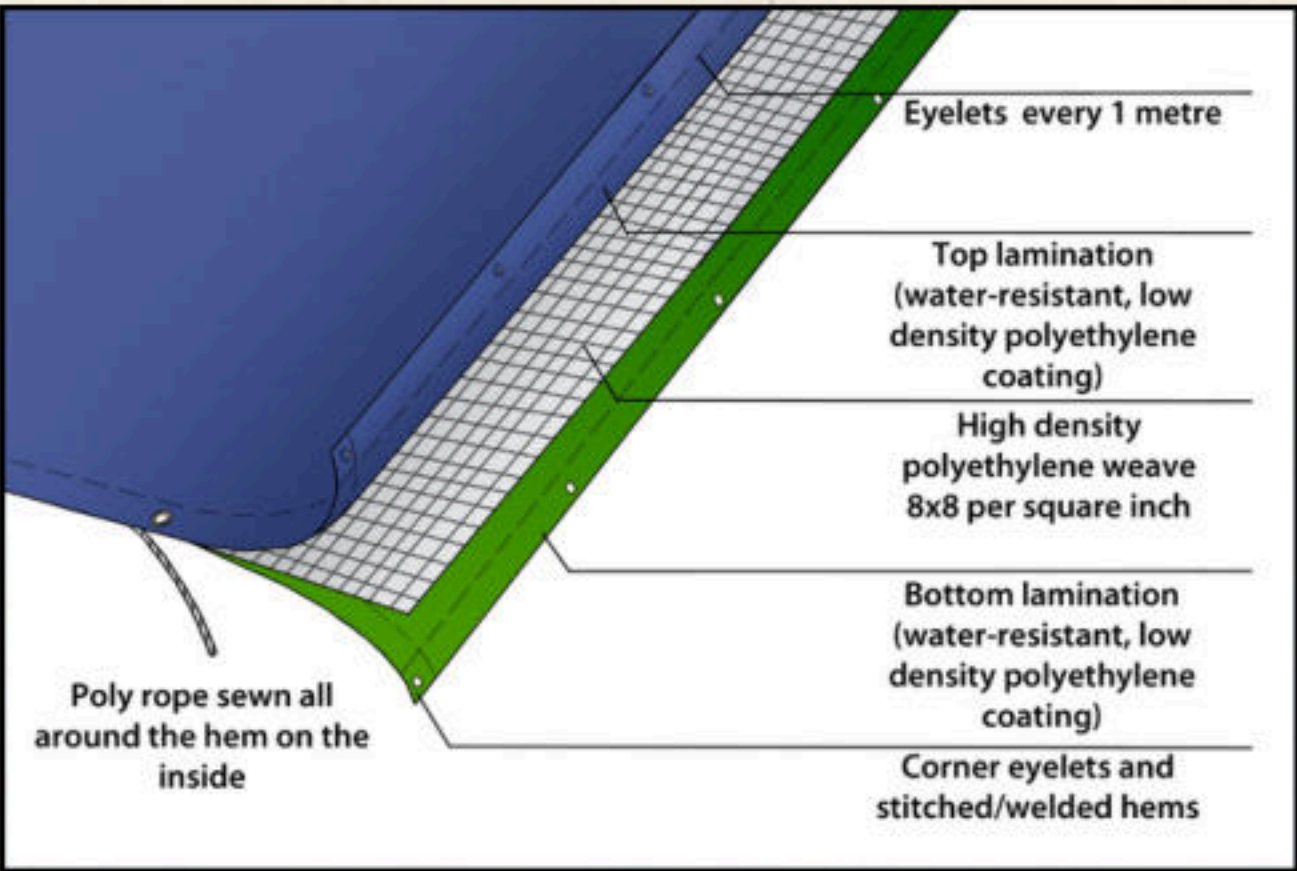

LIGHT WEIGHT

The starting point for your low cost covering requirements, our budget tarpaulins are waterproof and come complete with eyelets spaced every metre.

Great for temporary projects where cost is a priority over longevity, our budget tarps come in 5 popular sizes and are dual-coloured - blue on one side, and green underneath.

Widely used in construction sites these lightweight covers are rotproof, shrinkproof and easy to handle.

- Waterproof
- 70gsm
- HDPE weave with LDPE lamination
- 8x8 weave count
- Rotproof, shrink proof and UV protected
- Lightweight and easy to handle
- Aluminium eyelets at metre intervals
- Rope reinforced hems

STANDARD 110GSM TARPAULINS

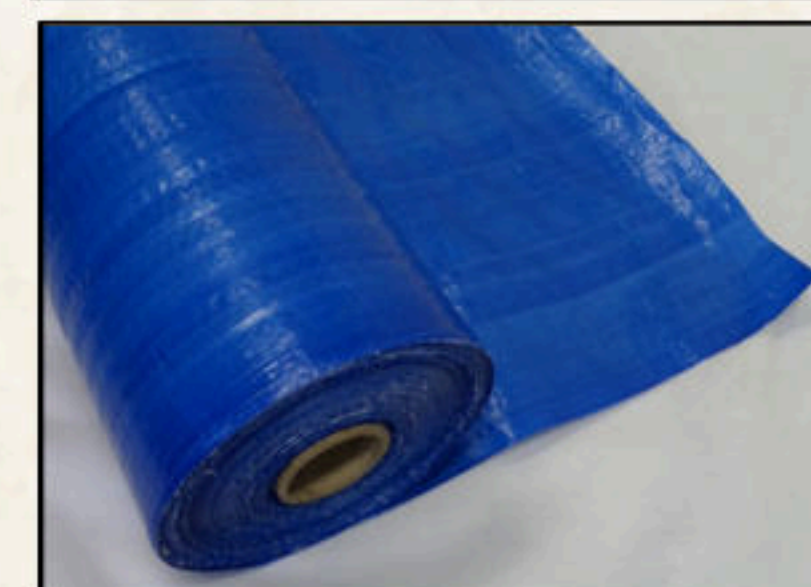

The Standard 110gsm tarps are a step-up from our 80gsm base range with a closer 10 x 10 weave count.

These covers are lightweight and easy to handle as well as being great value for money. They are perfect for multiple applications, from temporary covering solutions to such uses as hay tarps, groundsheets, building site covers, market stall covers and garden tarps. The white sheets are also effective in situations where light penetration is required.

MONO COVER 170GSM TARPAULINS

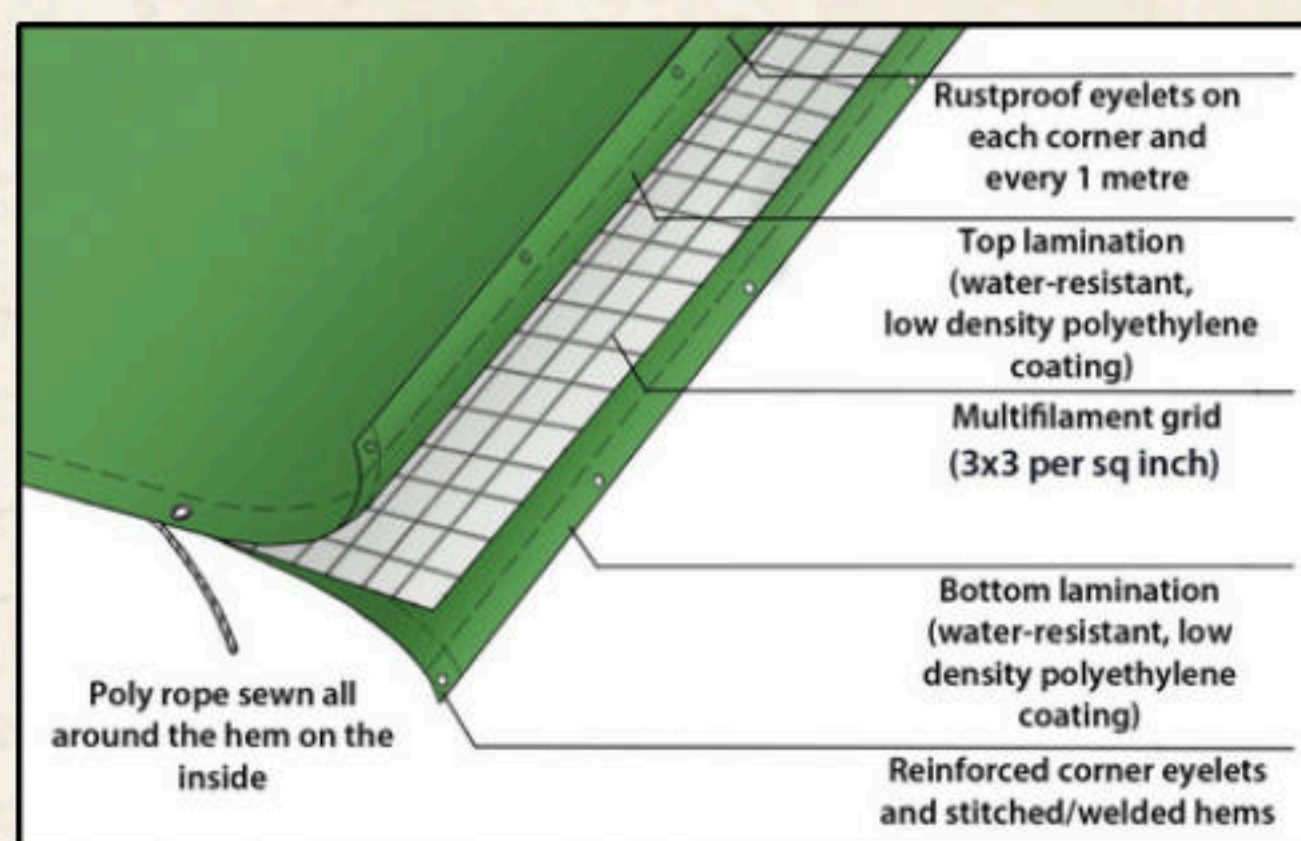

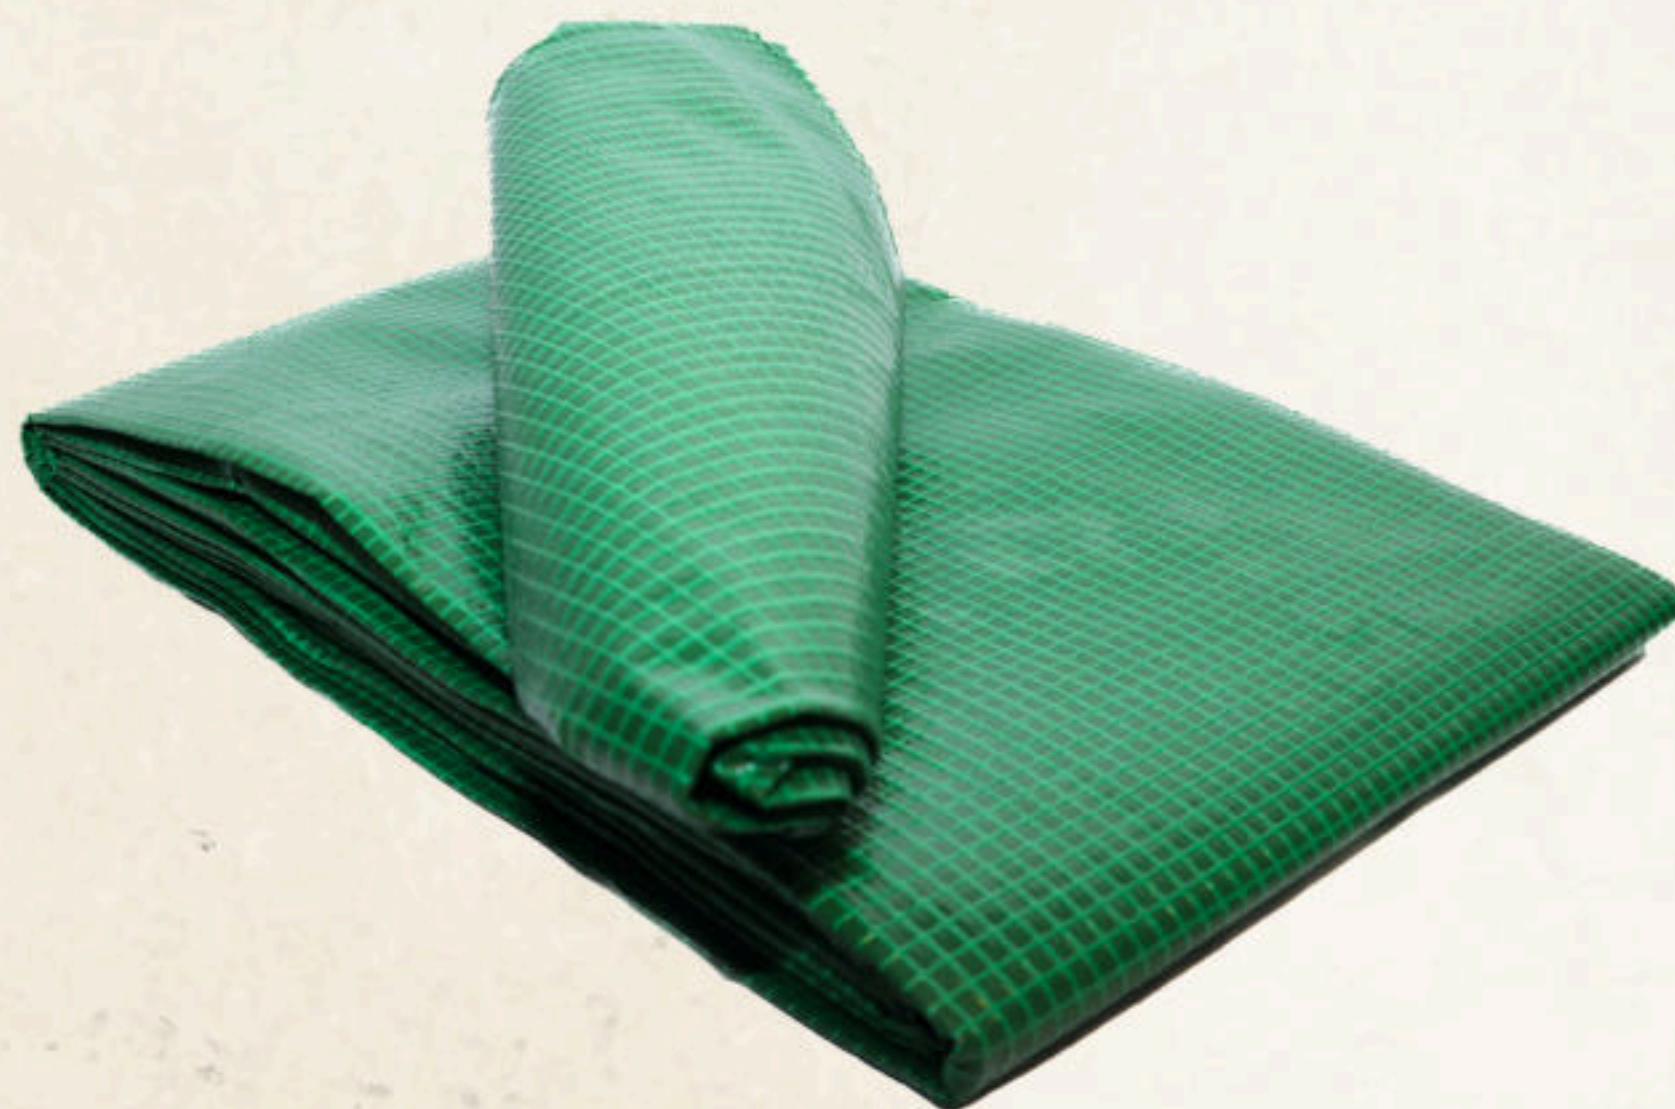

SCAN TO
ORDER
GREEN

The Mono Cover Tarpaulin is a competitively priced, mid-grade sheet which is suitable for use where a more rugged cover is required. It is constructed with a multifilament grid which is then laminated in LD polyethylene.

Currently available in nine sizes and two colours (Green or Clear); the Mono Cover Tarpaulin is widely used for covering hay, boat covers, roofing, construction and horticulture. The Clear Mono Cover is ideal for applications where you may need to work under the sheet, as it allows approx 70% light transmission. Also extremely popular as a cover over rabbit hutches and chicken coops.

- 12mm aluminium eyelets are pre-fitted at metre intervals, for fixing.
- Rotproof, shrink proof & UV Protected
- Waterproof
- 3 x 3 multifilament Grid
- 170gsm
- Plastic corner reinforcements
- Colours available: green or clear

STRIPED 170GSM TARPAULINS

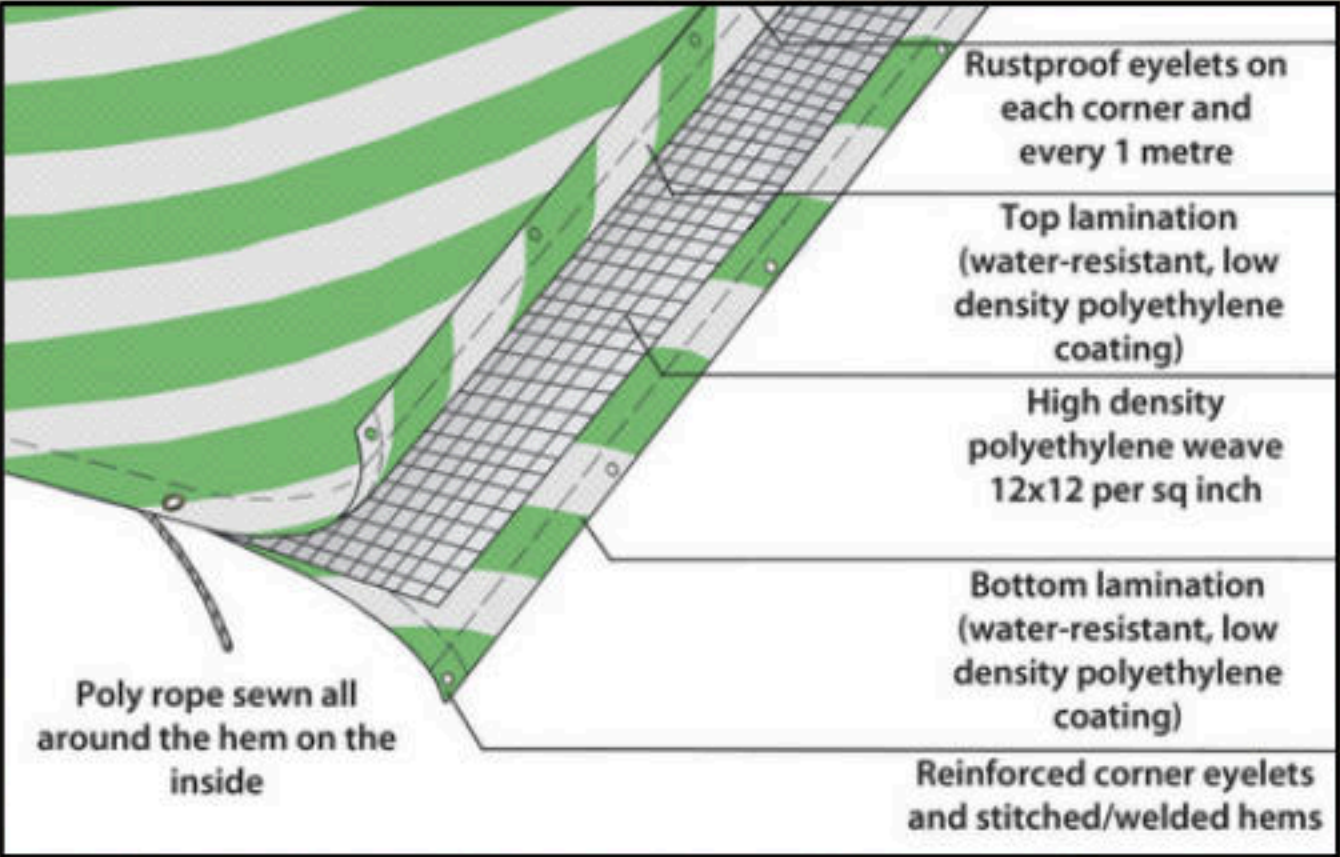

MEDIUM WEIGHT

Our range of striped tarpaulins are available in green & white, red & white and blue & white. They are most commonly used as covers for market stalls, and are UV protected and fade resistant.

Our market stall tarpaulins are manufactured to a 12 x 12 weave and 170gsm. Aluminium eyelets are spaced at one metre intervals, with additional plastic corner reinforcements. Commonly used as either roof covers or side sheets for market stalls this popular range is available in 8 sizes, in 3 different colour combinations. [Market Stall Clips](#) are a popular accessory for holding sheets in place.

As a general rule, stripes will run along the longer length; however this cannot be guaranteed.

- Waterproof
- 170gsm
- Tough spec 12 x 12 mesh
- Rotproof, shrinkproof and UV protected
- Aluminium eyelets at metre intervals on all 4 sides
- Plastic corner reinforcements

(Please Note: All the above tarpaulin sizes are 'cut sizes' which is industry standard terminology for the size of the material before it is fabricated into a tarpaulin. Therefore expect the 'finished' size to be up to 30 cms shorter, and up to 45cm on very large sizes.

BROWN/BLUE 185GSM TARPAULINS

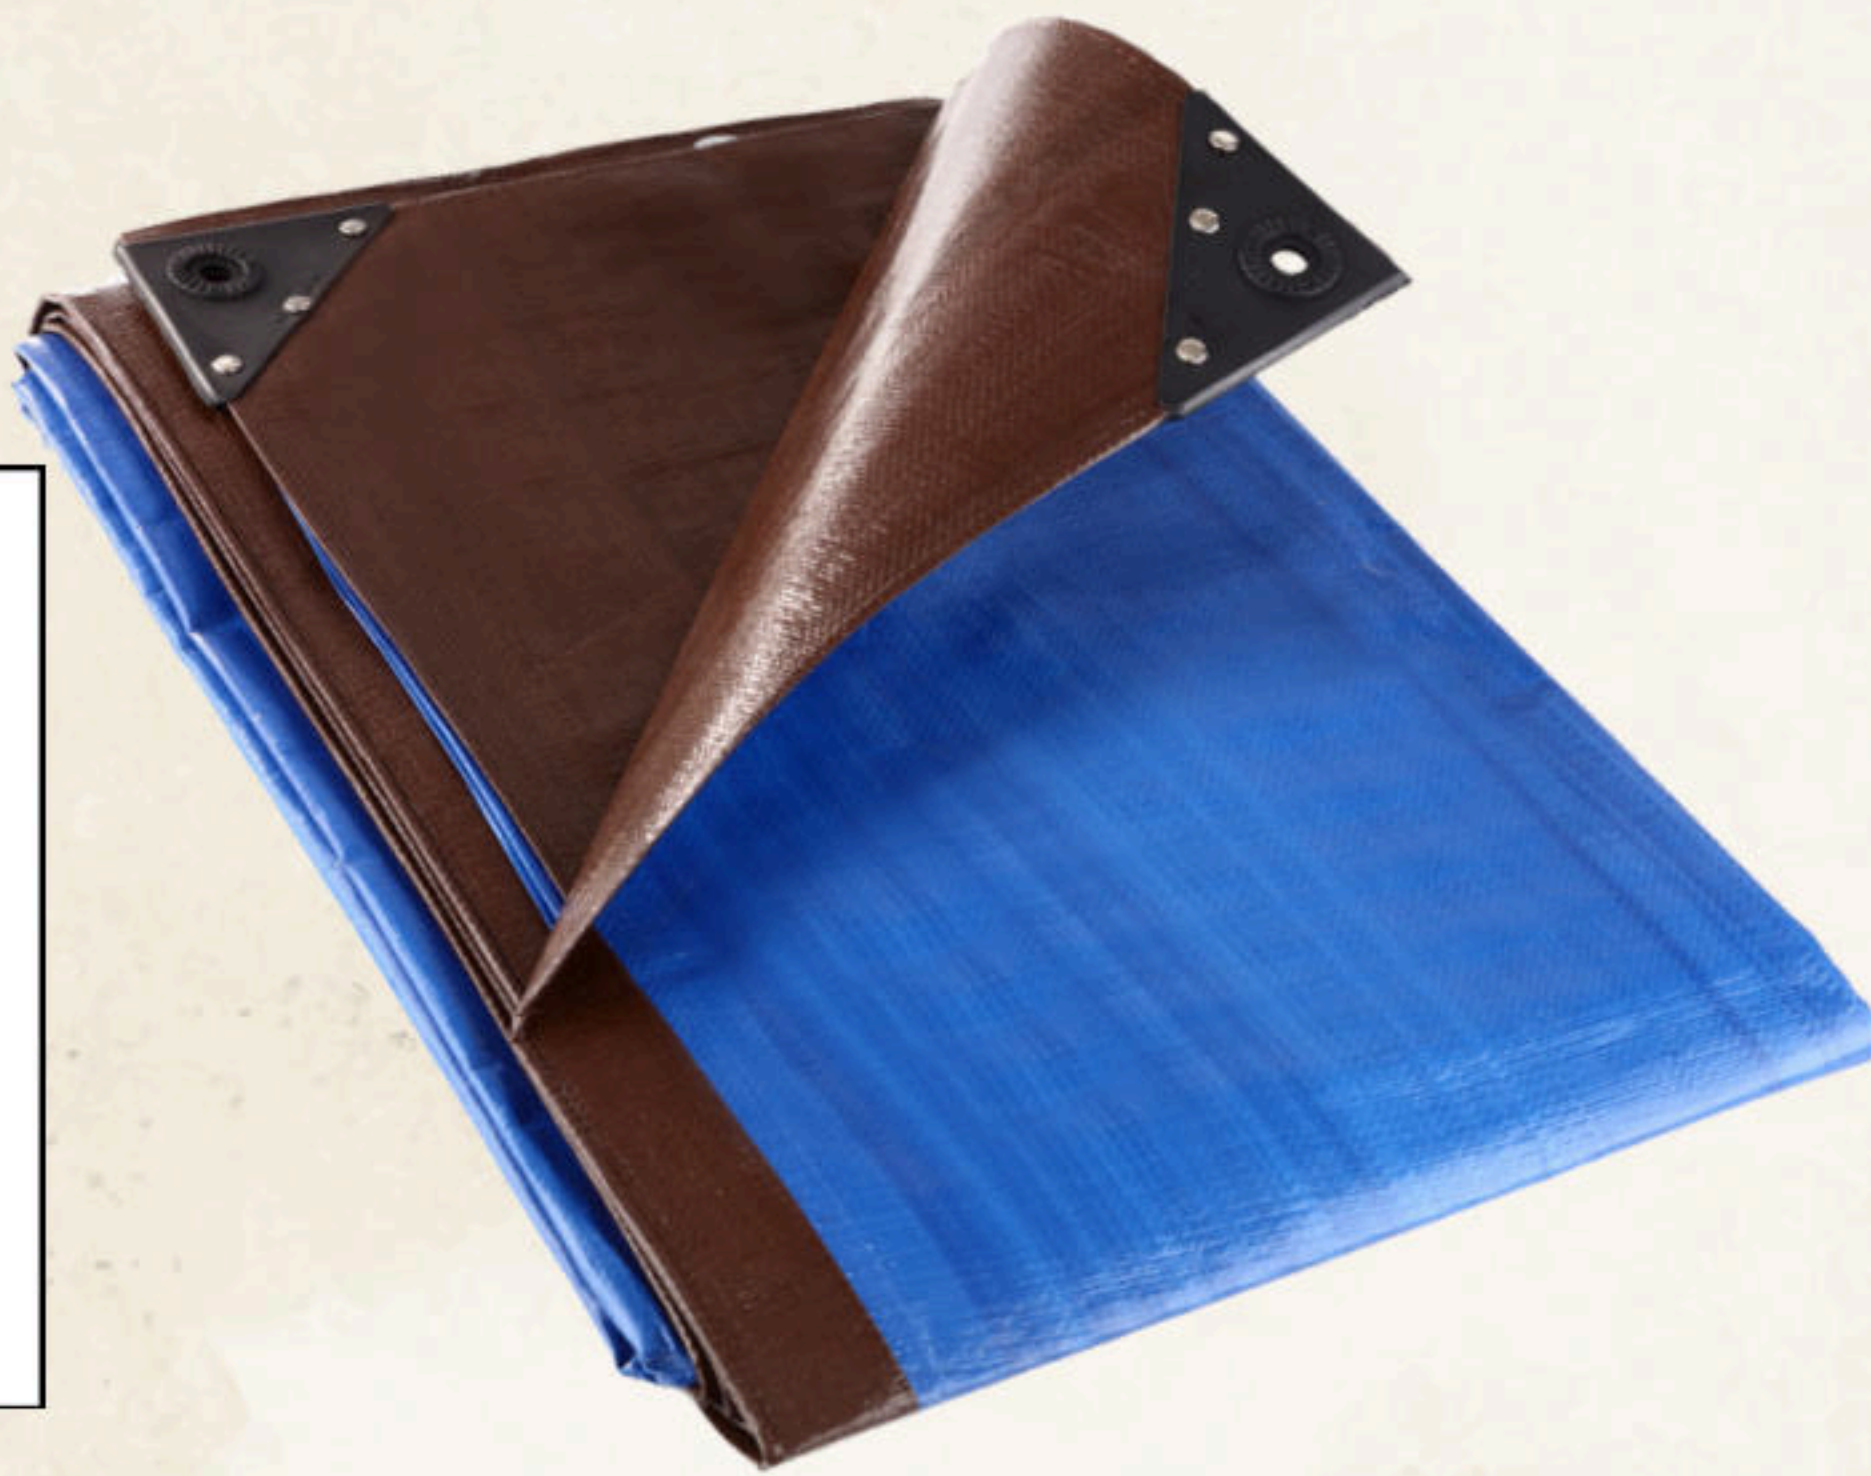

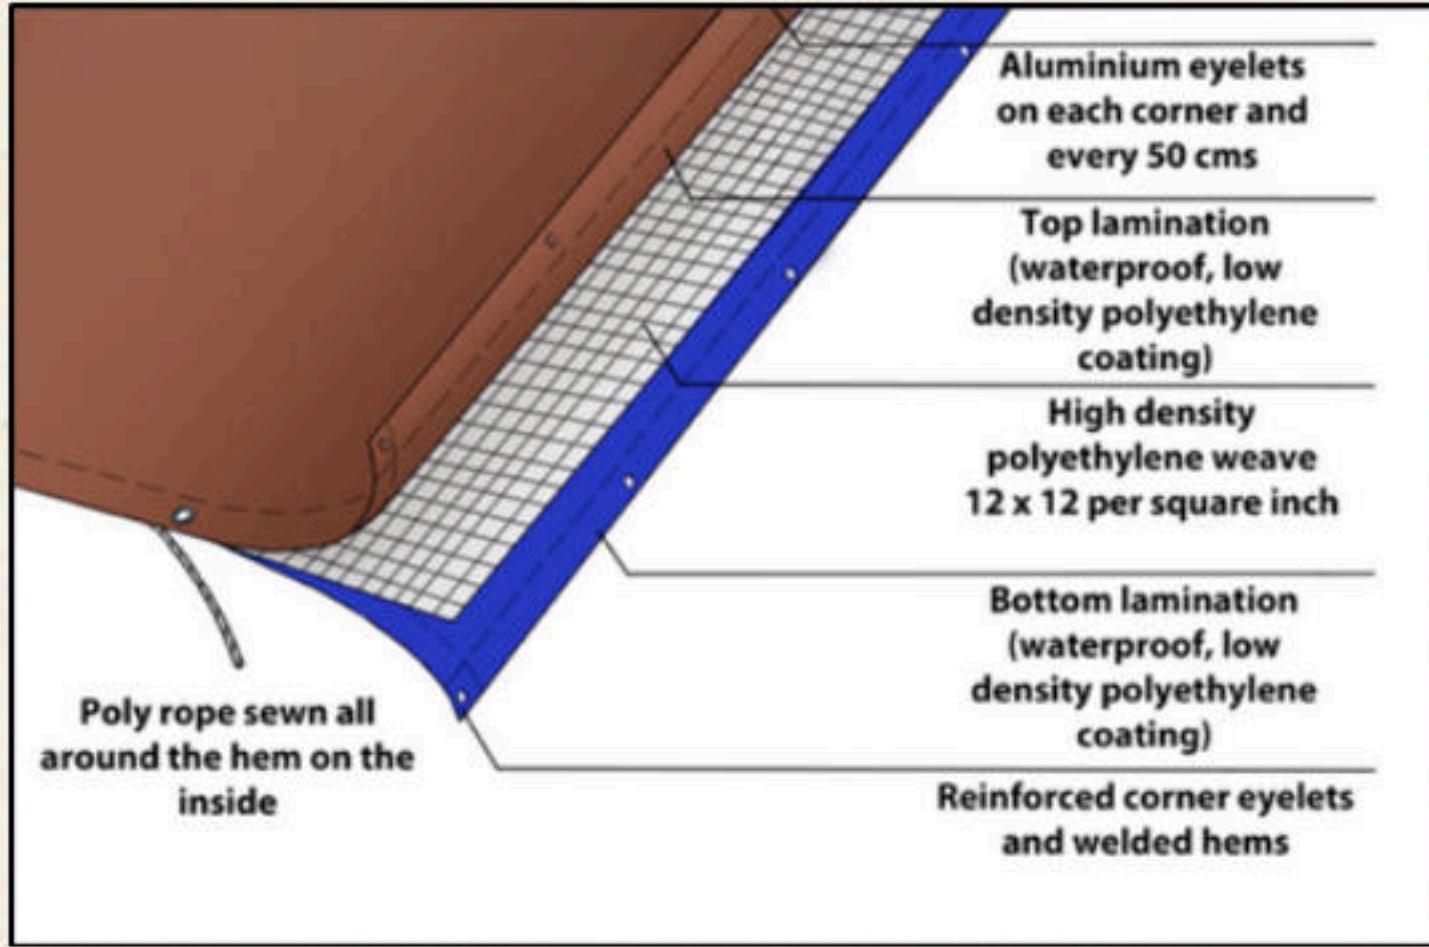

SCAN TO
ORDER

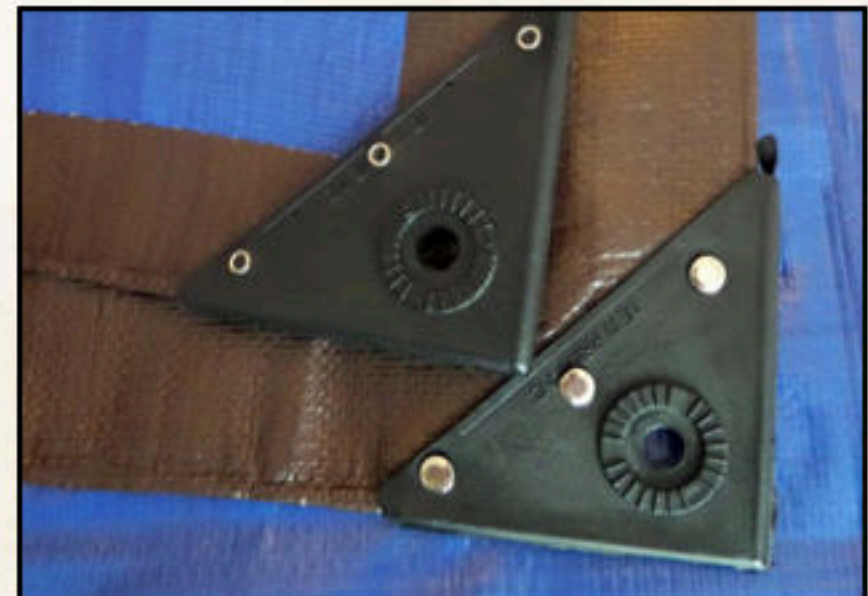

At 185gsm, these heavy duty waterproof tarps come complete with 12mm aluminium eyelets spaced at 50cm intervals in rope reinforced hems, and sturdy reinforcements sited at each corner. The HDPE polyethylene weave is laminated in an LDPE with 3% UV inhibitor, to ensure against premature degradation in the sun.

Available in 8 sizes, this is a popular product for a range of uses including; log store covers, hay and straw tarpaulins, roofing tarps, boat covers, and many more. Manufactured in a dual-colour scheme of brown and blue, these robust tarpaulins blend well in an outdoor setting, and so are also popular for use as furniture and garden covers.

- 185gsm
- Waterproof
- Aluminium eyelets at 50cms on all 4 sides
- 12 x 12 weave count
- Rotproof, shrinkproof & UV protected

HEAVY WEIGHT 250GSM TARPAULINS

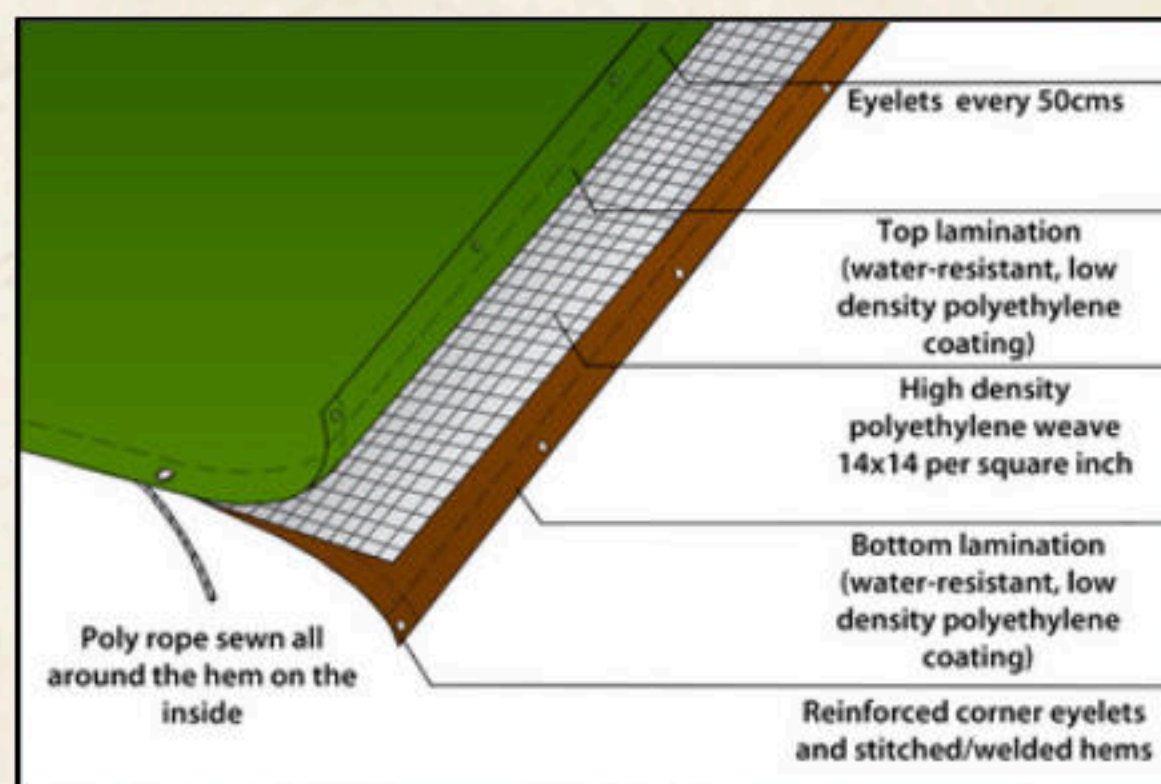

HEAVY WEIGHT

Our Green / Brown Tarpaulins weigh in at 250gsm. These robust tarps are heavyweight but easy to handle, and offer an economical alternative to canvas or PVC.

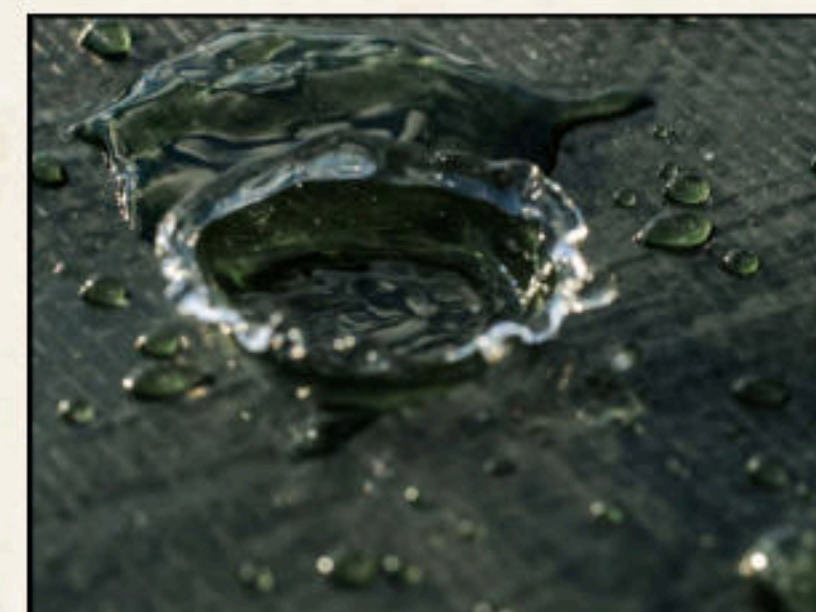

The Green / Brown Heavy Duty tarpaulins have a tight 14x14 weave count, 3% UV inhibitor with 12mm aluminium eyelets at 50cm intervals (note. riveted corner eyelets are 8mm). A rough & tough tarpaulin which will blend in well with an outdoor setting, the colour scheme makes this range the ideal outdoor cover. Popular for use as a log store cover, groundsheet and in garden applications.

Each Green / Brown 250gsm tarpaulin is sold with a limited 1 year warranty against UV failure. The warranty is subject to use in UK conditions only, and does not cover wear and tear or weather damage, but warrants the cover against UV failure for 1 year from invoice date.

- Waterproof
- 14 x 14 weave count
- 250 gsm
- Rotproof & shrinkproof
- 1 year limited warranty against UV failure
- Aluminium eyelets every 50cm on all 4 sides
- Corner reinforcements
- Colour: green outside / brown inside
- Produced to finished size
- Available in 11 sizes

HEAVY WEIGHT 270GSM TARPAULINS

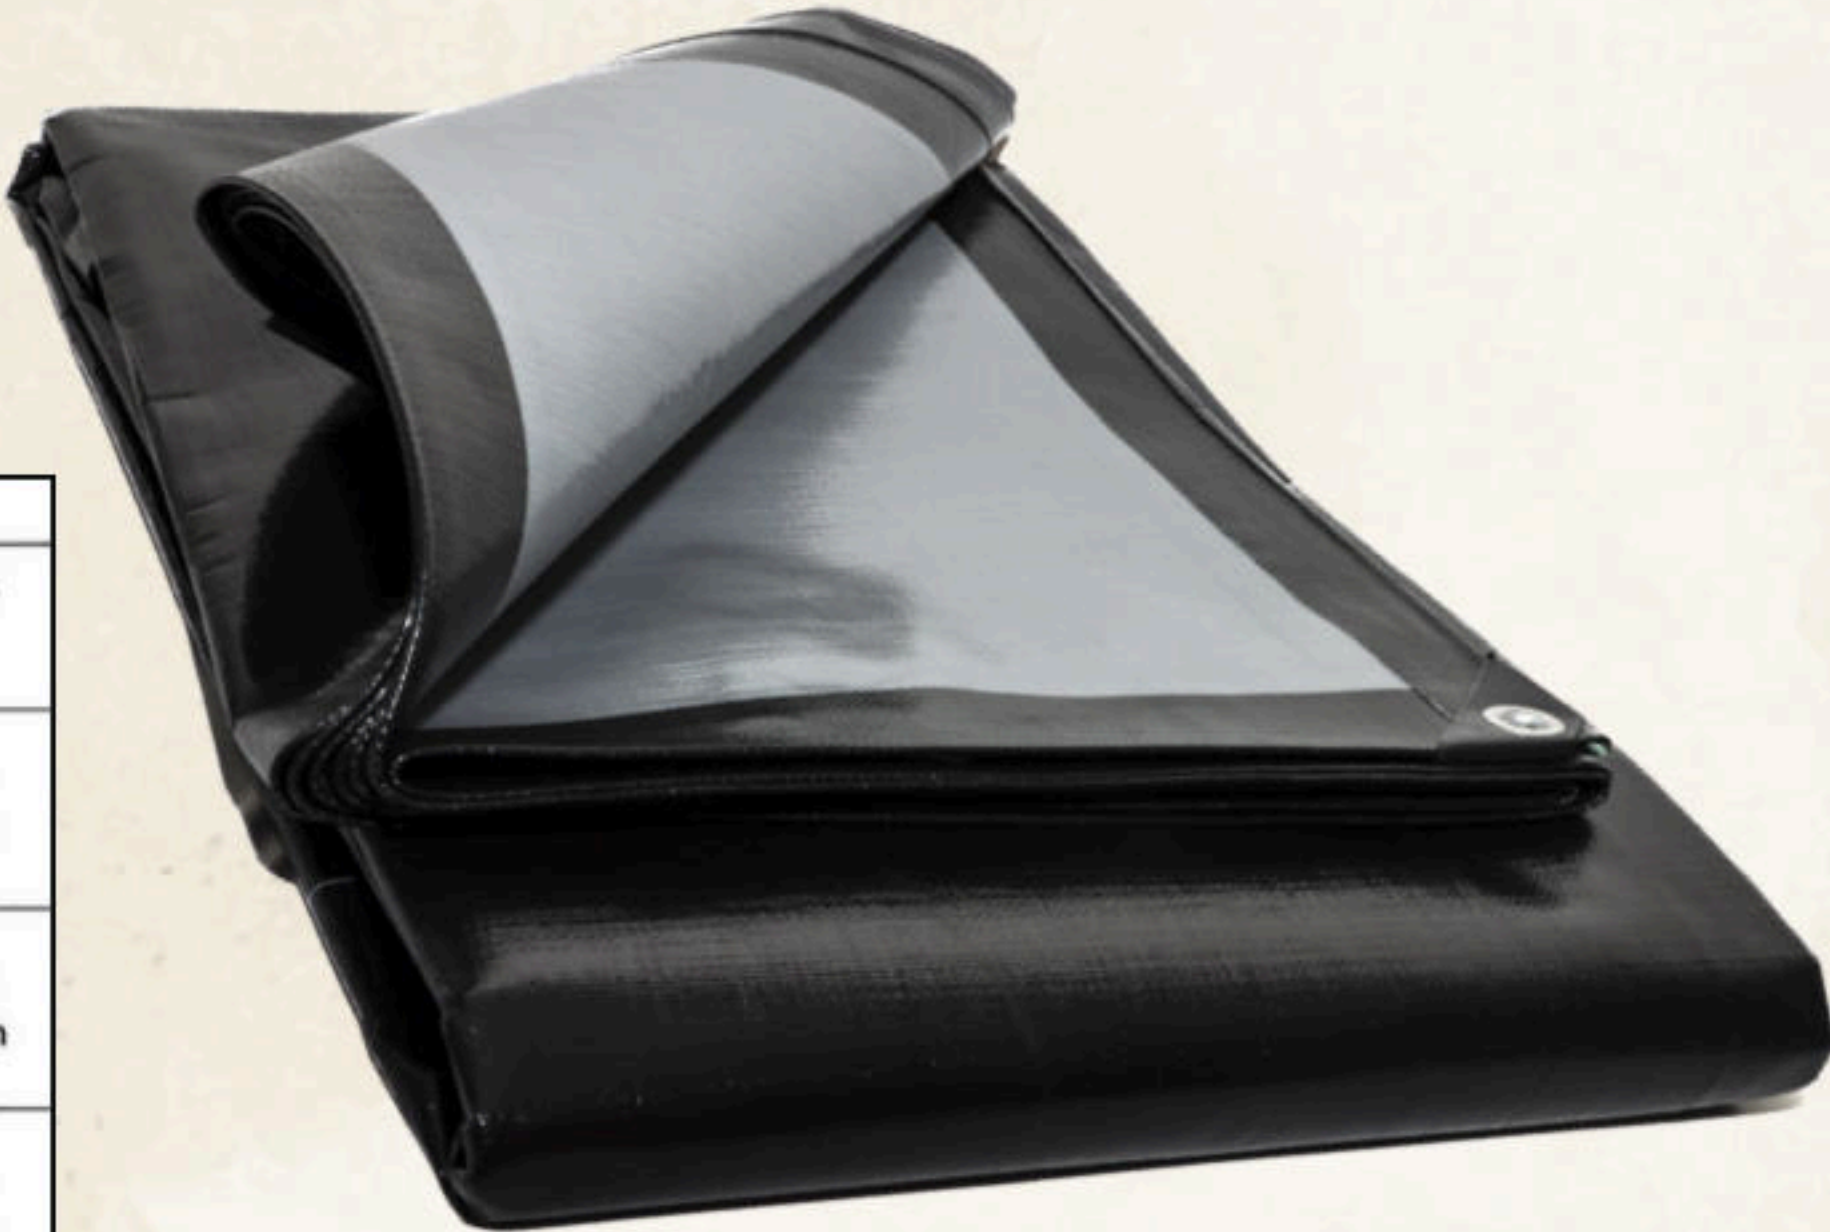

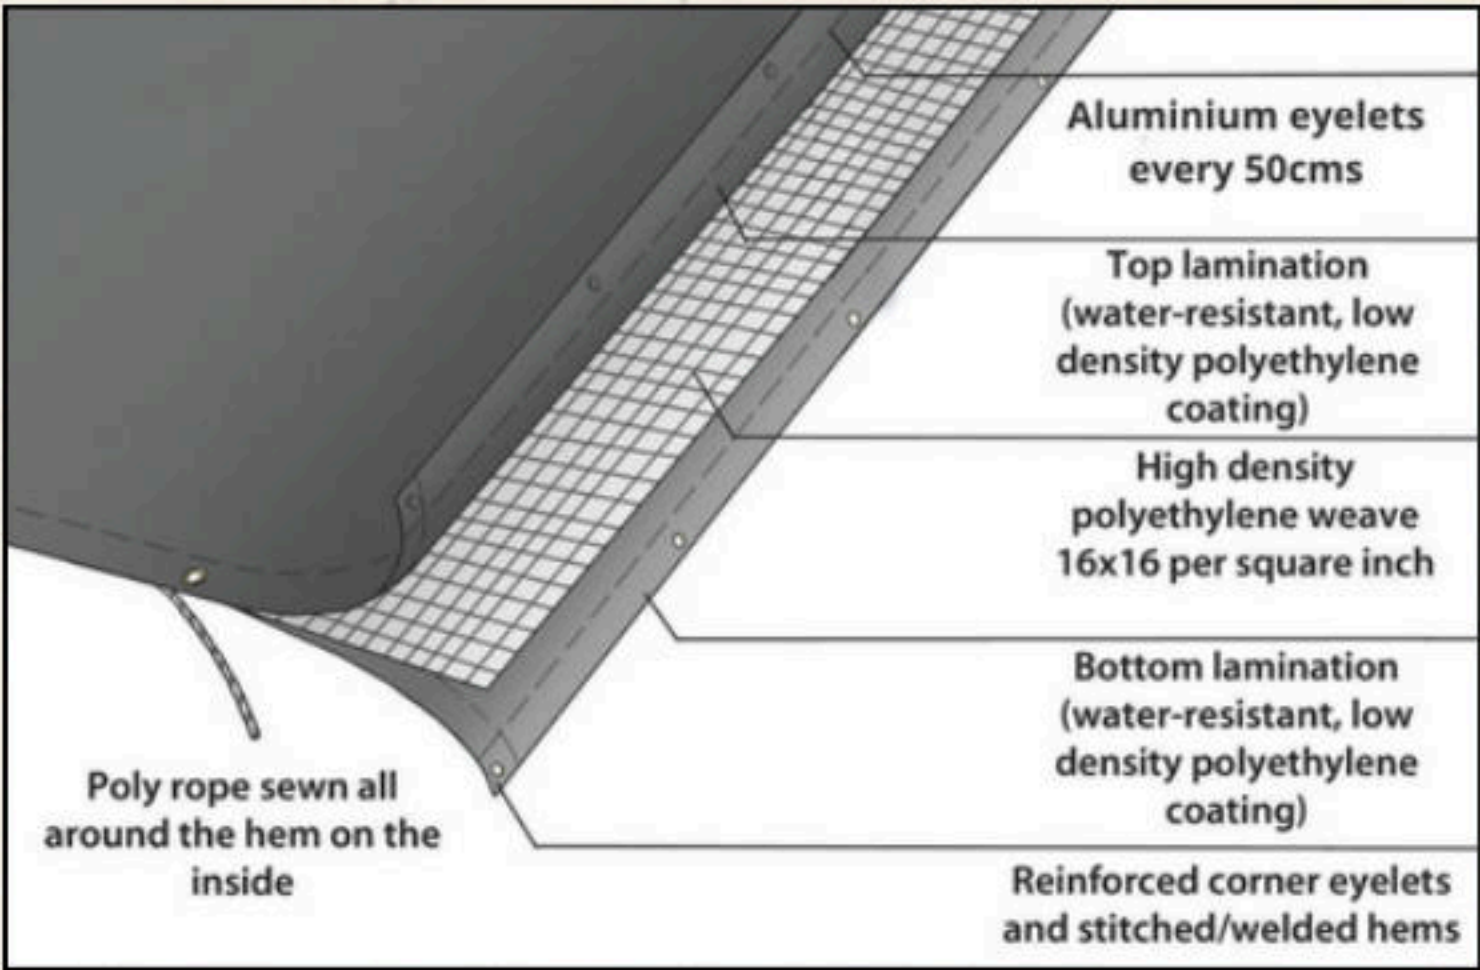

The Black / Silver Heavy Duty tarps are fabricated to 270gsm with a 16 x 16 weave count. Eyelets are fitted at 50cms intervals, and each corner is fitted with a corner patch.

Our 270gsm tarps are manufactured with a silver top hemmed onto a black underside; there is a 3% UV inhibitor in the lamination. Although fabricated from a heavy weight polyethylene, these hardy covers remain manageable and easy to handle, and are fully waterproof. Popular as roofing covers and boat tarps.

Each Black / Silver 270gsm tarpaulin is sold with a limited 18 month warranty against UV failure. The warranty is subject to use in UK conditions only, and does not cover wear and tear or weather damage, but warrants the cover against UV failure for 18 months from invoice date.

GLASS CLEAR PVC 310GSM TARPAULINS

SUPER
HEAVY
WEIGHT

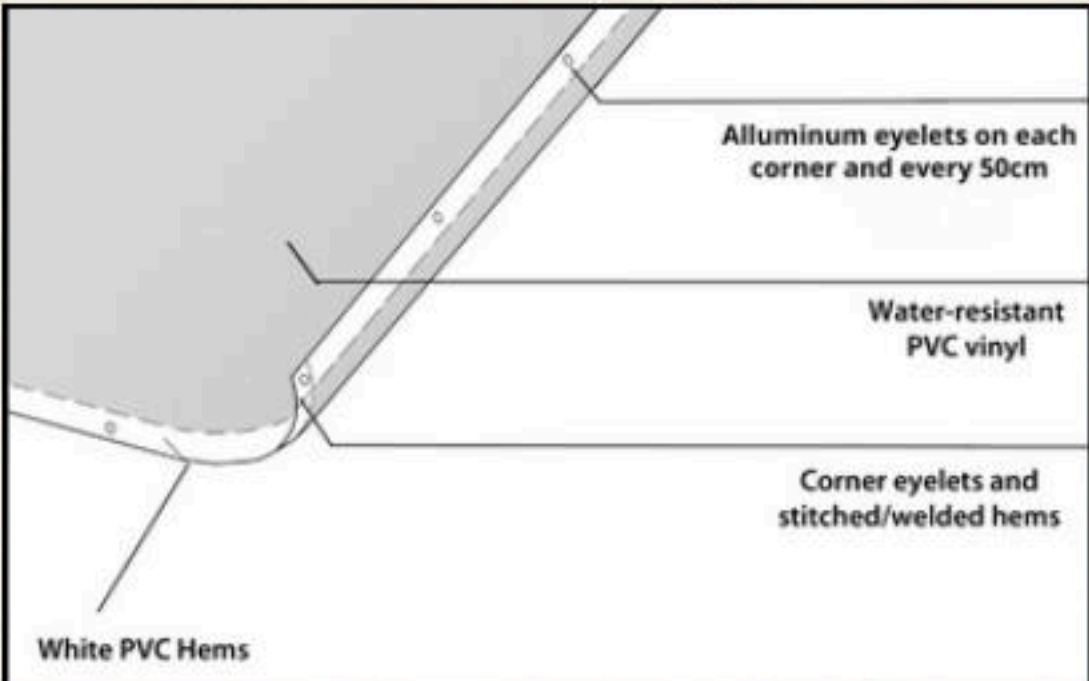

Our clear PVC tarpaulins are excellent for projects where maximum light penetration is required. Made from waterproof vinyl, these tarpaulins are widely used as side curtains on market stalls, or as a cover over goods during bad weather. Clear PVC tarpaulins can be used to work underneath in the garden or during building work as they do not block out light while keeping the working area dry.

Also particularly popular as a waterproof cover for animal enclosures such as rabbit hutches, kennels and poultry houses, especially during bird flu outbreaks. These even work well as a water slide!

With the exception of the 1.1m x 25m roll, each tarpaulin comes with a white PVC reinforced hem, with 12mm aluminium eyelets at 50cm intervals. As our glass clear PVC tarps are an unsupported PVC without any base layer they do not have the same tensile strength as tarps with a similar weight. As a result we do not recommend the eyelets on these tarps to be put under strain, tension or fixed directly to hooks. If using the eyelets we suggest elasticated bungee cord rather than rope. **See page 32 & 33 for more information.**

For customers interested in the small 1.2m x 2m size there will be a seam and there are a total of 4 eyelets across the 1.2m width.

- Waterproof
- Clear vinyl PVC material
- 12mm aluminium eyelets at 50cm intervals
- White PVC Hems - Single stitched
- Shrinkproof, rotproof & UV Protected
- Produced to finished size
- Available in 11 sizes,
- Plus a roll option without hems and eyelets

Alluminum eyelets on each corner and every 50cm

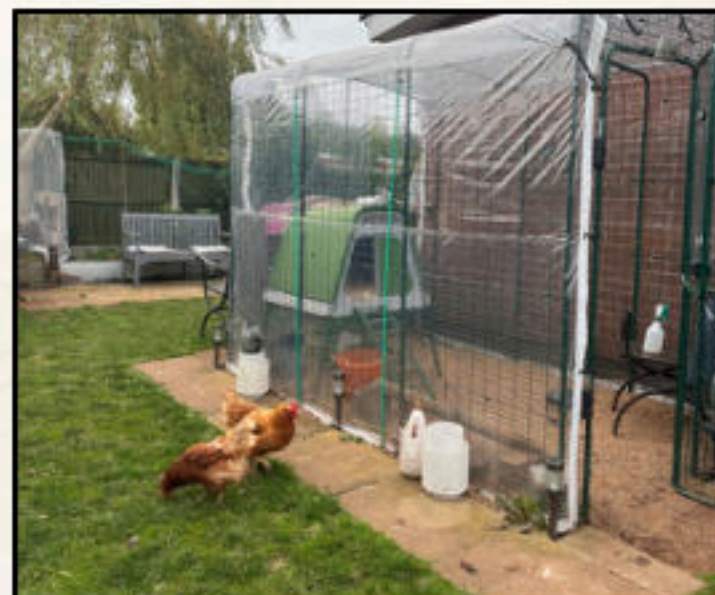

Water-resistant PVC vinyl

Corner eyelets and stitched/welded hems

SUPER HEAVY WEIGHT 560GSM PVC TARPAULINS

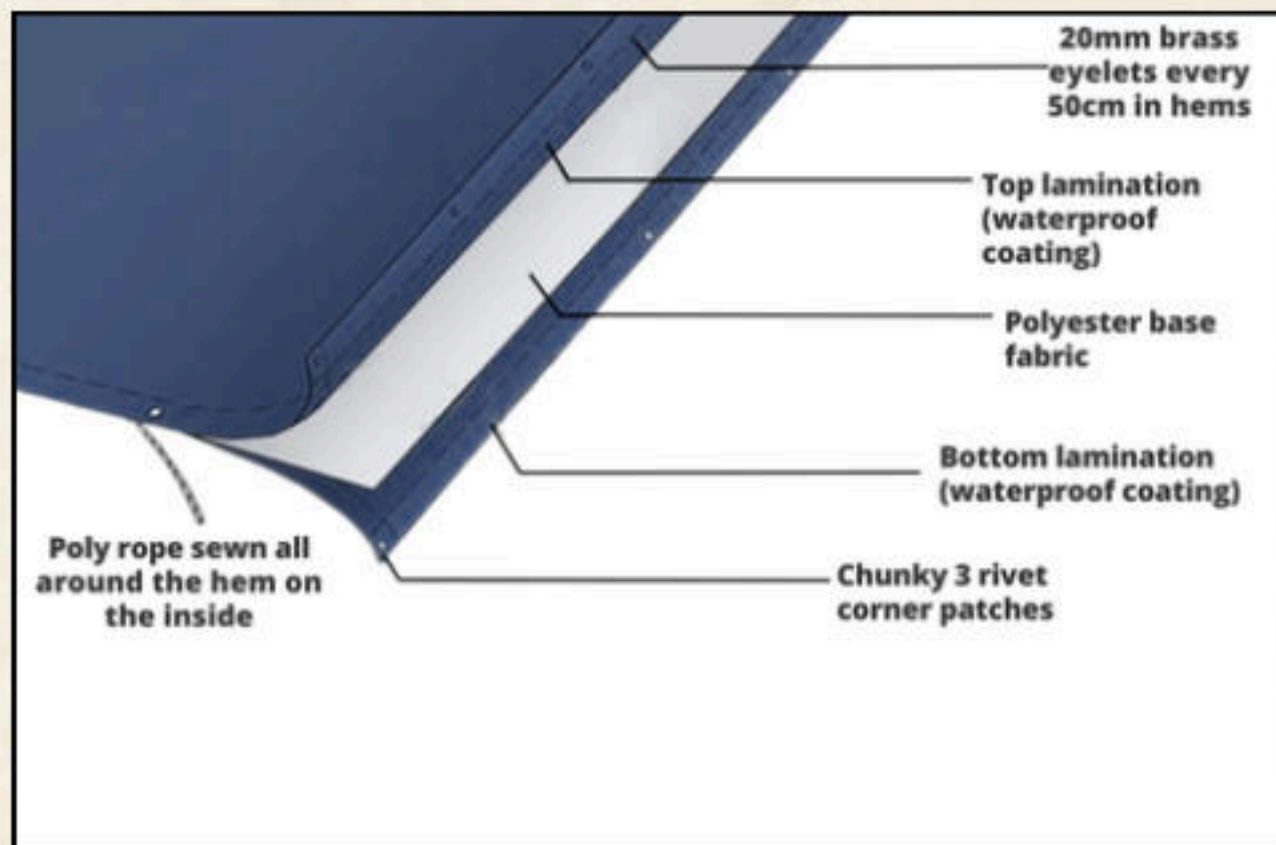

SUPER HEAVY WEIGHT

Our heavy duty PVC tarpaulin is currently the heaviest specification plastic tarpaulin we supply at 560gsm. Made from PVC coated polyester, these strong tarpaulins are flexible in sub-zero conditions, rot proof & extremely hard-wearing.

20mm brass eyelets are spaced at 50cm intervals in rope reinforced hems, and chunky 3 rivet corner reinforcements are on all 4 corners. Suitable for many applications from a heavyweight groundsheet to a hay stack cover, or boat cover.

Each PVC 560gsm tarpaulin is sold with a limited 2 year warranty against UV failure. The warranty is subject to use in UK conditions only, and does not cover wear and tear or weather damage, but warrants the cover against UV failure for 2 years from invoice date.

STANDARD 18OZ COTTON CANVAS TARPAULINS

SCAN TO
ORDER

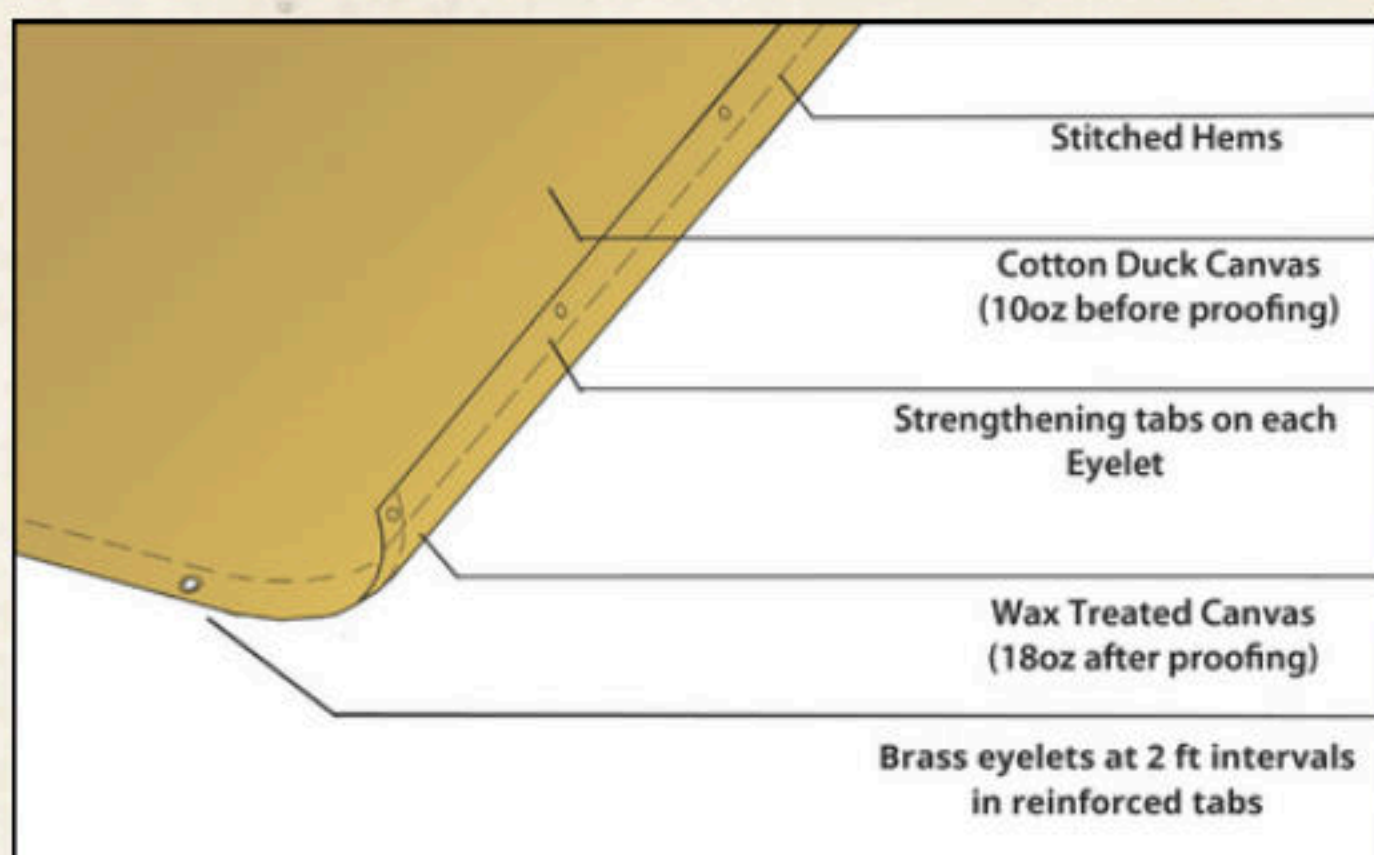

A traditional style 100% cotton canvas tarpaulin made from single filled cotton duck. These tarpaulins are imported from India, and are wax processed to make them water resistant. Double stitched seams, single stitched hems, and brass eyelets are spaced at 2ft intervals (60cms) in reinforced tabs. The weight of the proofed canvas is 18oz, or approx 610gsm.

Fabricated from a natural fabric, these hardy tarps are breathable; however please bear in mind that a minimal amount of shrinkage can occur where canvas tarpaulins are subject to varying temperatures. Canvas tarpaulins will require re-treating after exposure to water, in order to maintain their resistant properties.

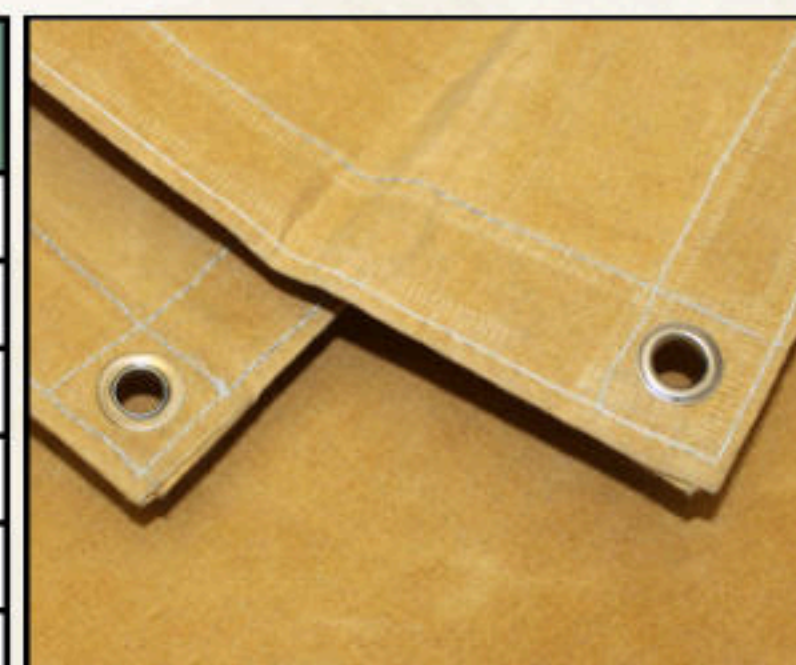

These tarpaulins are wax-proofed and have been dyed, and so there can be a risk of colour transference upon application - please take caution. We do not recommend that these tarpaulins are suspended solely by the eyelets if using as an outdoor canopy. It is highly recommended to use a ridge line, or a couple ridge lines on larger sizes, made of rope or bungee which will help support the weight of the tarp. This will also help with a run-off of water as water can pool if tarps are suspended only by the eyelets, adding extra pressure and weight.

We recommend 'weathering' the canvas before first use. **See page 35** for information on [how to 'weather' the canvas.](#)

- Water resistant heavy weight canvas
- 12mm Brass eyelets at 2ft intervals in strengthening tabs
- Double stitched Seams and single stitched hems
- Rotproofed & wax processed using vegetable wax to make them water-resistant
- 10oz material / 18oz when proofed

You may also be interested in: [Heavy Duty PVC Tarpaulins](#) on **page 18**.

(Please Note: our 18oz canvas tarpaulin sizes are **finished sizes** however there may be a slight variation in size during the fabrication of the tarp. However we do not expect the finished size to be more than 5 cms shorter. Once the tarp has been weathered there may be slight shrinkage in the material. Most canvas tarps will have a seam as they are fabricated by stitching.)

COLOURS
AVAILABLE

HEAVY WEIGHT 21OZ COTTON CANVAS TARPULINS

CANVAS

SCAN TO
ORDER

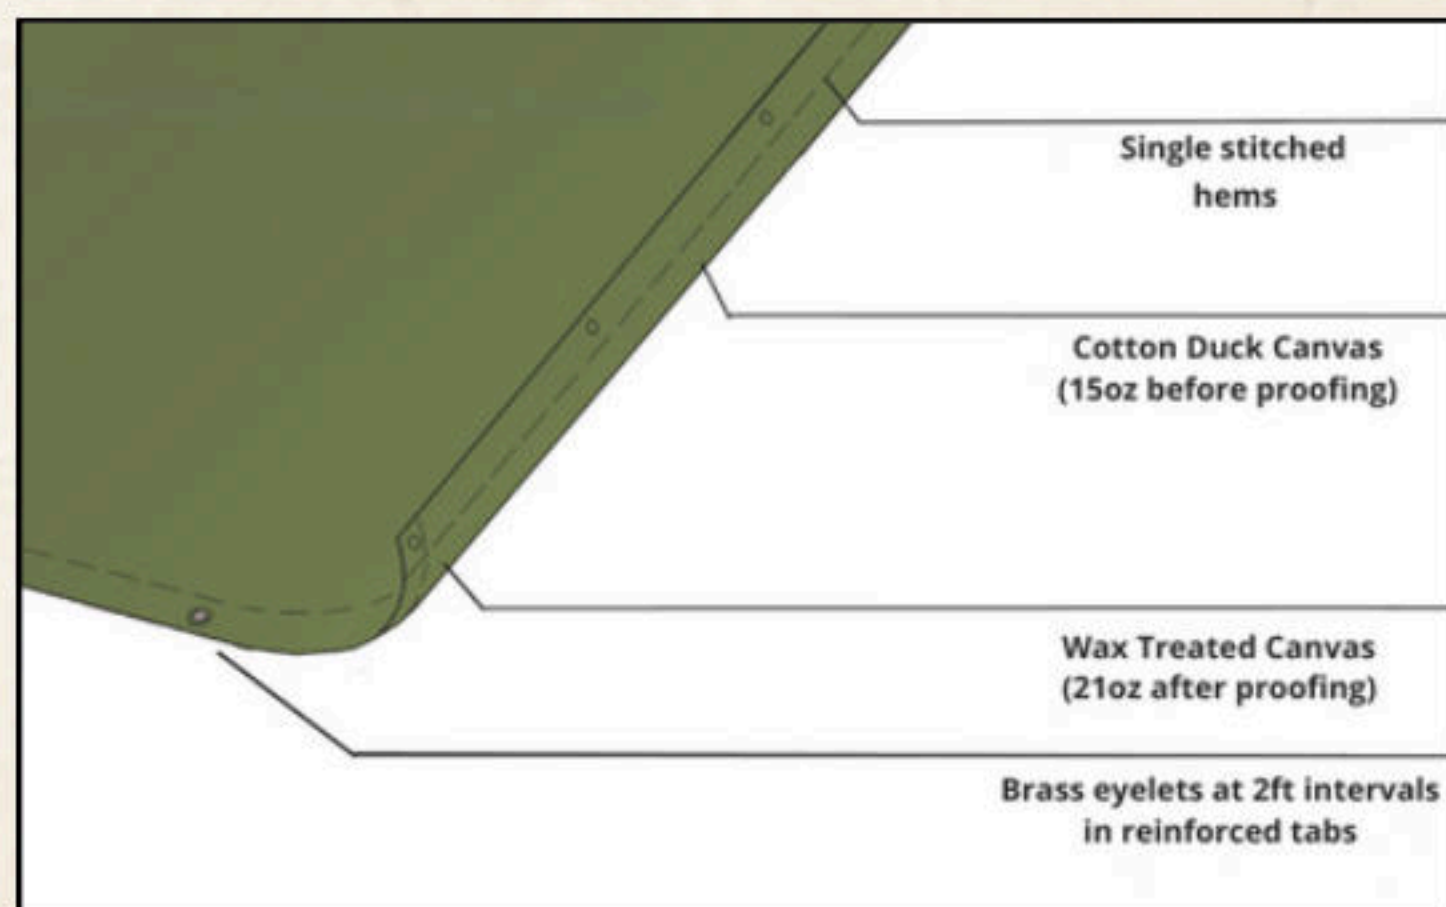

Our water resistant Heavy Weight Canvas tarpaulins are manufactured from single filled cotton duck. Imported from India, these heavyweight sheets are 15oz before proofing, resulting in a robust finished weight of 21oz/710gsm after wax treatment.

A dark military green in colour these tarps blend in well with most outdoor settings. Made from cotton, these canvas tarpaulins offer a natural alternative to plastic tarpaulins. As they are heavy weight compared to most other tarps they drape well and are more resistant to abrasion and punctures while remaining breathable. Rust resistant brass eyelets are set into tabs at 2ft intervals along the edge and on all four corners. Hems and seams are single-stitched.

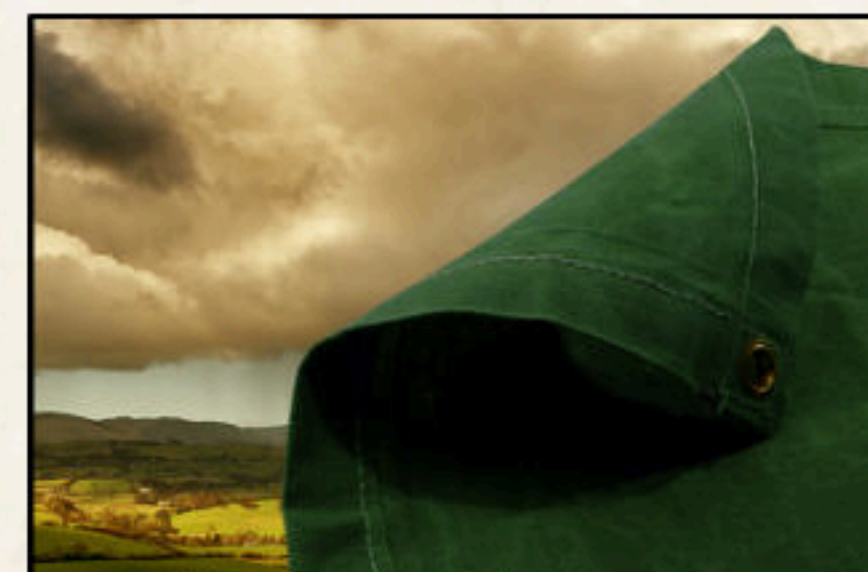

These tarpaulins are wax-proofed and have been dyed, and so there can be a risk of colour transference upon application - please take caution. We recommend 'weathering' the canvas before first use. **See page 35** for information on [how to 'weather' the canvas](#).

We do not recommend that these tarpaulins are suspended solely by the eyelets if using as an outdoor canopy and do not put excessive pressure on the eyelets. It is highly recommended to use a ridge line, or a couple ridge lines on larger sizes, made of rope or bungee which will help support the weight of the tarp. This will also help with a run-off of water as water can pool if tarps are suspended only by the eyelets, adding extra pressure and weight. Use as many of the eyelets provided and install additional eyelets if required, especially if there are stress points. As our canvas tarps are fabricated from a natural fabric, these tarps are breathable; however please be aware a minimal amount of shrinkage can occur where canvas tarpaulins are subject to varying temperatures. Our robust canvas tarps are wax-proofed to make them water-resistant; they will require re-treating after a period of exposure to water and the elements, in order to maintain their resistant properties.

- Water resistant heavy weight canvas - rotproofed & wax processed using vegetable wax.
- Double-stitched seams and single stitched hems
- Heavyweight 21oz material when proofed
- Produced to finished size - manufacturing tolerance max. 5cm
- 12mm brass eyelets at 2ft intervals in reinforced tabs

COLOURS
AVAILABLE

RIPSTOP 17OZ COTTON CANVAS TARPAULINS

SCAN TO
ORDER

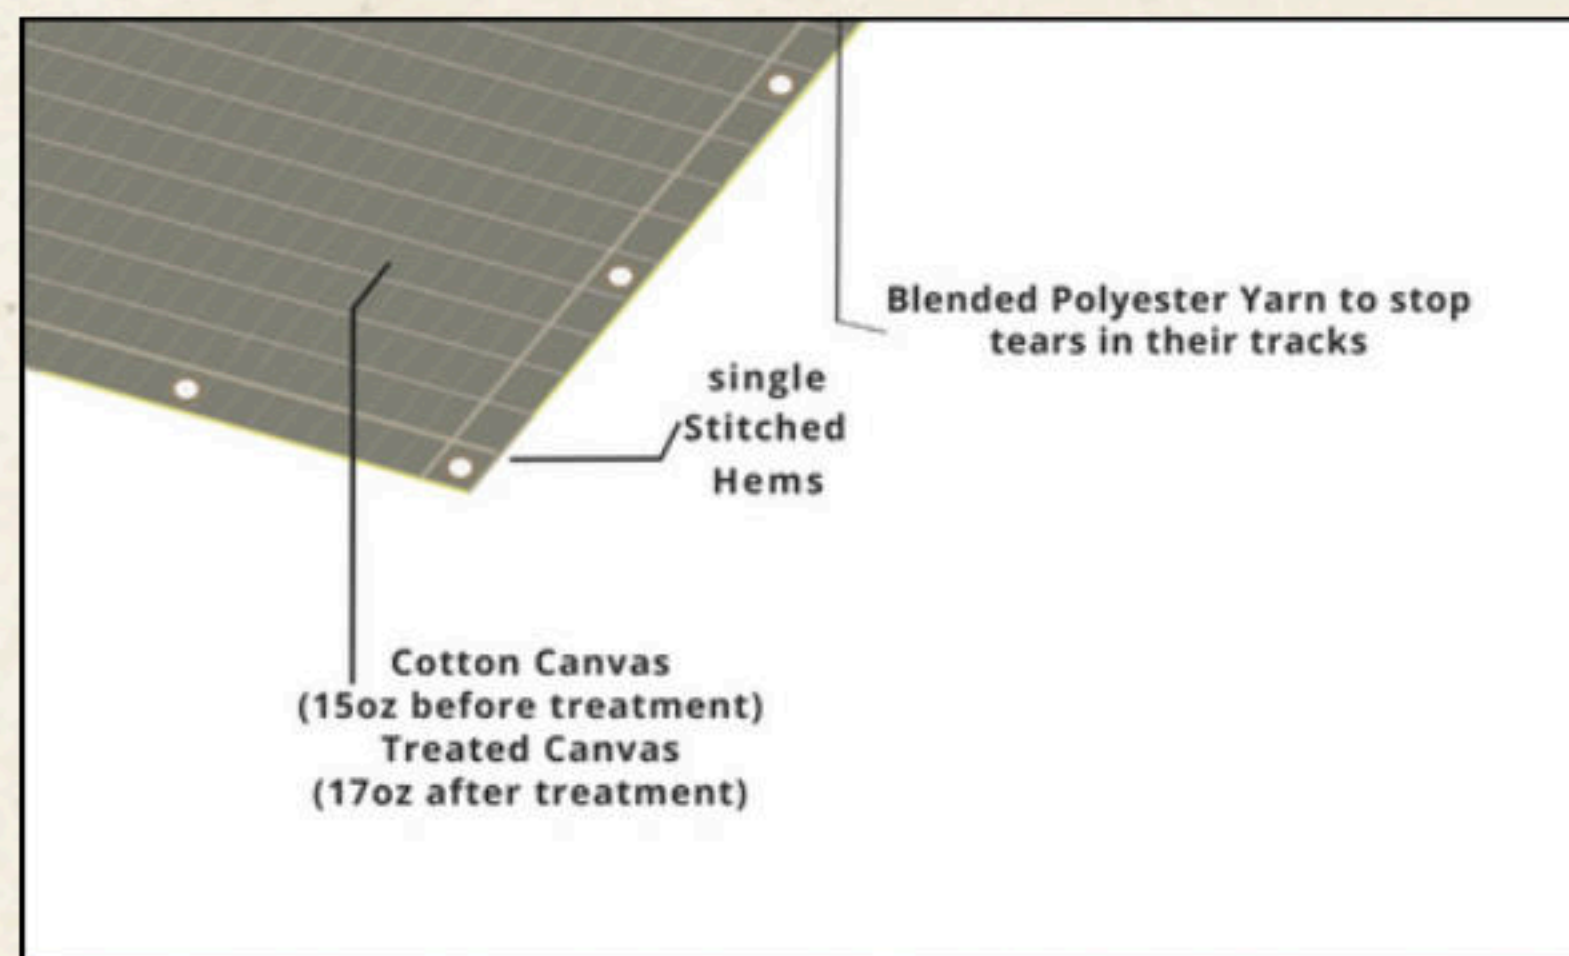

The Ripstop Canvas tarpaulins are blended with a polyester yarn which localises tears and stops them running. At 15oz before treatment, our Ripstop Canvas is a 17oz once proofed. These tarpaulins are imported from India.

Ripstop Canvas tarpaulins are manufactured from a heavyweight cotton which has been treated to make them water resistant, ensuring that they are easier and lighter to handle than traditional wax-processed canvas tarps. 12mm brass-plated eyelets sit at 2ft intervals in single-stitched hems. Strengthening tabs are located at each eyelet, to ensure a firm fixing point.

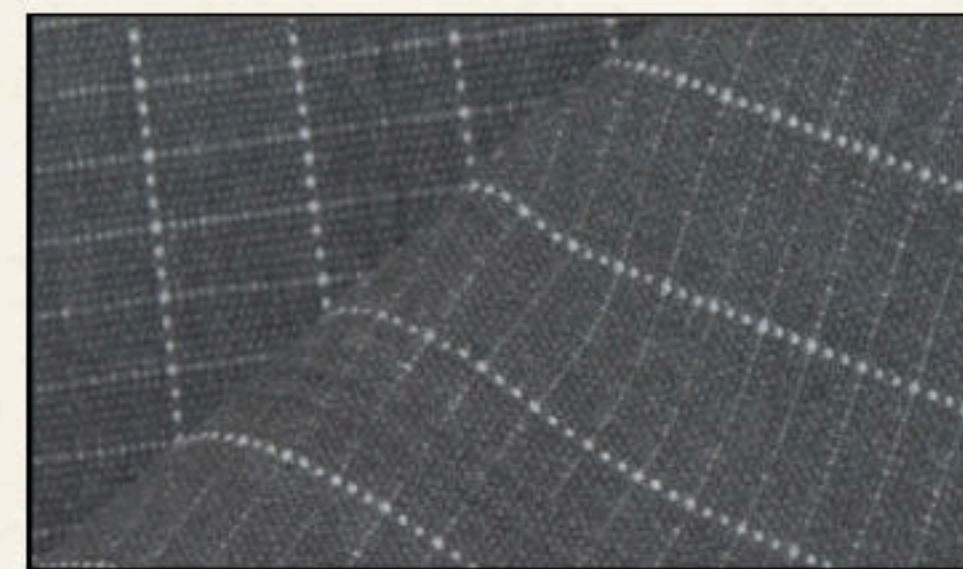

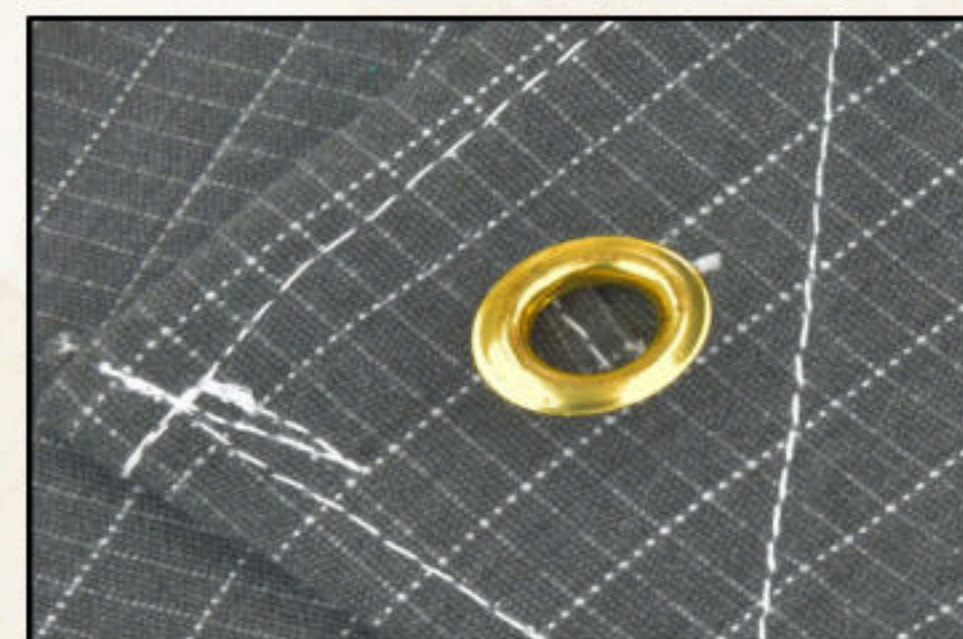

Please bear in mind that these tarps are a cut size so the finished size will be slightly shorter, also a minimal amount of shrinkage can occur where canvas tarpaulins are subject to varying temperatures. These robust canvas tarps are chemically treated to make them water-resistant and they don't have the same wax processed feel as some other canvas tarps.

These tarpaulins have been treated and dyed, and so there can be a small risk of colour transference upon application - **please take caution.**

- Chemically treated and therefore lighter to handle than wax-processed tarpaulins
- Water resistant heavy weight canvas
- Fabricated from cotton canvas blended with polyester yarns, resulting in ripstop properties
- 12mm brass-plated eyelets at 2ft intervals in stitched hems
- Double stitched hems & single-stitched seams
- Untreated 15oz / 17oz material when treated

Dust sheets are a popular year-round product and Tarpaflex covers all bases, from standard twill up to heavy weight cotton canvas. Popular with home DIYers, professional decorators, builders' merchants and wholesalers alike, our full range is reusable and washable (excepting the laminated dust sheets).

We import our range of dust sheets from a manufacturer certified to OEKO-TEX Confidence in Textiles standards, where the cotton raw material has been tested for harmful substances. Therefore you can be confident that the cotton used in your dust sheet has not been treated with substances that may be harmful to your health. The raw material produced has also been grown with the environment and social responsibility in mind. Available in 5 ranges with various weights:

- Cotton Twill (including stair way)
- Bolton Twill
- Laminated Twill
- Cotton Calico
- Cotton Canvas

Here is a brief description of the different types available:

COTTON TWILL – Standard grade dust sheet with a twill woven construction. Widely used for covering furniture and floors. Our most popular dust sheet used by builders and decorators, available in 3 sizes including a stairway dust sheet. Twill dust sheets have a coarse thicker thread when compared to calico dust sheets. Washable and reusable.

COTTON CALICO – the popular cotton calico dust sheet is a finer, softer cotton than cotton twill with a tighter plain weave. Less likely to allow dust to penetrate. Washable and re-usable.

BOLTON TWILL - A heavier grade high density dust sheet, this is a more tightly woven version of our standard Twill dust sheet. More suited to repeated usage the Bolton Twill is professional quality. Washable and reusable.

HEAVY DUTY COTTON CANVAS – Extremely tight weave with a thick thread, the cotton canvas dust sheet is the professional’s choice for a prolonged working life. This premium grade dust sheet is for the serious painter or decorator and is washable and reusable.

LAMINATED TWILL – The same as our standard cotton twill dust sheet but with a thin plastic membrane laminated to the underside of the sheet. The plastic layer stops any potential liquid spills or heavy dust from penetrating through the sheet, therefore giving the user peace of mind that any spills will be contained to the sheet.

LIGHT WEIGHT DEBRIS NETTING

SCAN TO
ORDER

Lightweight Debris Netting.

Our lightweight netting is made from UV stabilised polyethylene monofilaments which creates an open mesh netting.

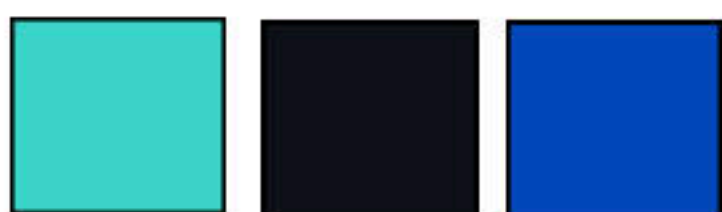

Typically used as a netting to keep debris and rubbish contained within building sites and scaffold systems. It helps protect workers and the general public from potentially dangerous small debris.

Also extremely popular as a net to cover plants, crops, seedlings and produce in gardens, allotments and in the general agricultural environment. Will help keep out birds, butterflies and other pests from your valuable produce.

You may also be interested in our [privacy netting](#). See **Page 25** for more information.

- Available in 1m, 2m or 3m widths (selected colours/grades)
- Knitted eyeholes along both edges and through the centre
- Mesh size : approx 2-5mm
- Density / opacity : approx. 50%
- Colours: black, blue or green

STANDARD & HEAVY DUTY DEBRIS NETTING

SCAN TO
ORDER

Standard debris netting

Our debris netting is also available in a standard 70gsm grade in green or black, primarily used on scaffolding systems to keep any rubbish or debris contained on a building site, it improves site safety by reducing the risk of objects falling outside the working area. By aiding the containment of debris, a safer environment is afforded to both workers and the general public.

- Available in green or black.
- Mesh size : approx. 2-5mm
- Density / Opacity : approx. 50%
- Knitted eyeholes along both edges and through the centre

Heavy Duty & Extra Heavy Duty debris netting

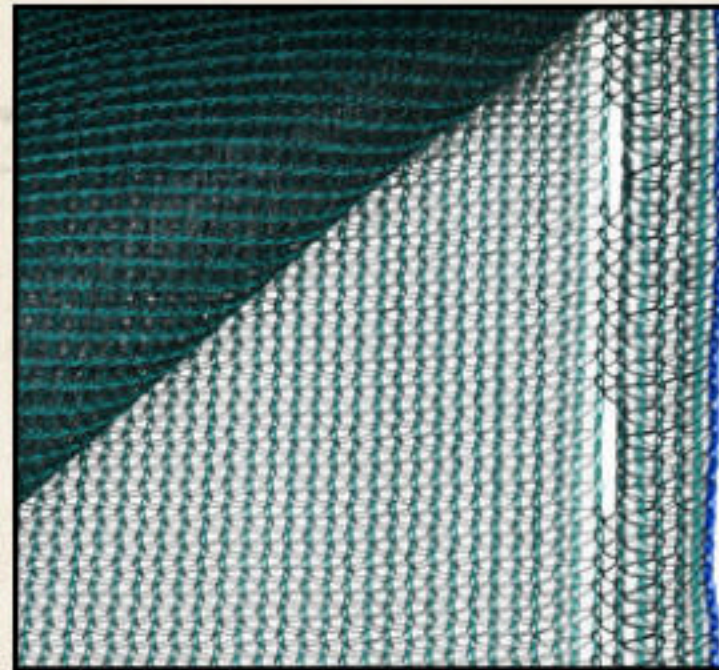

Our Heavy Duty and Extra Heavy Duty Debris Netting offers exceptional protection and durability for demanding environments. Designed for construction sites, scaffolding, and industrial applications, our netting provides reliable containment of debris while allowing excellent air circulation and light penetration. Manufactured from high-density polyethylene with UV protection.

- 100gsm heavy duty netting available in grey
- 150gsm extra heavy duty netting available in green
- Mesh size : approx 2-5mm
- Density / Opacity : approx. 50%
- Knitted eyeholes along both edges and through the centre

Flame Retardant netting

We also have a white 60gsm flame retardant option that is certified to US Standard NFPA 701, that is available in a 2mx50m size.

- Available in white
- Certified to US Standard NFPA 701
- Mesh size : approx 2-5mm
- Density / Opacity : approx. 50%
- Knitted eyeholes along both edges and through the centre

Please also see **Page 23** for our [lightweight netting](#).

COLOURS AVAILABLE

PRIVACY NETTING

SCAN TO ORDER

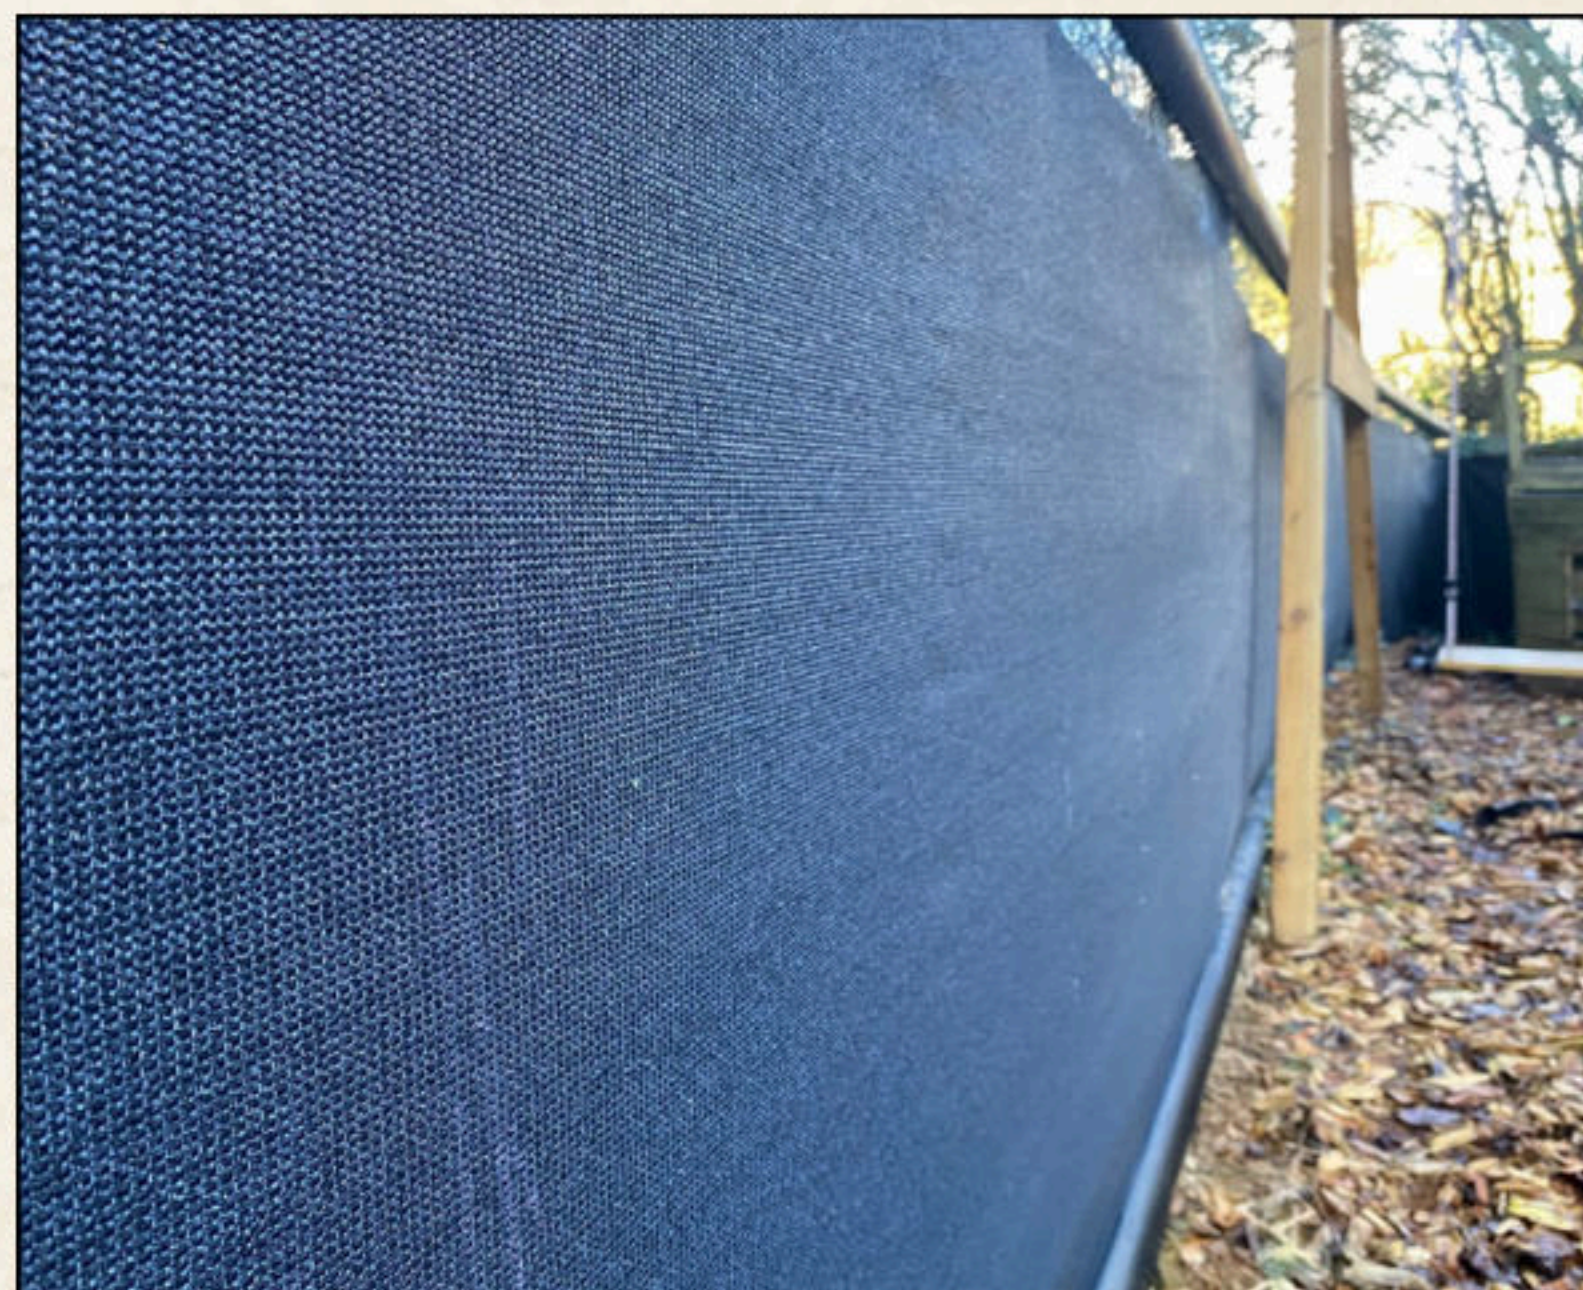

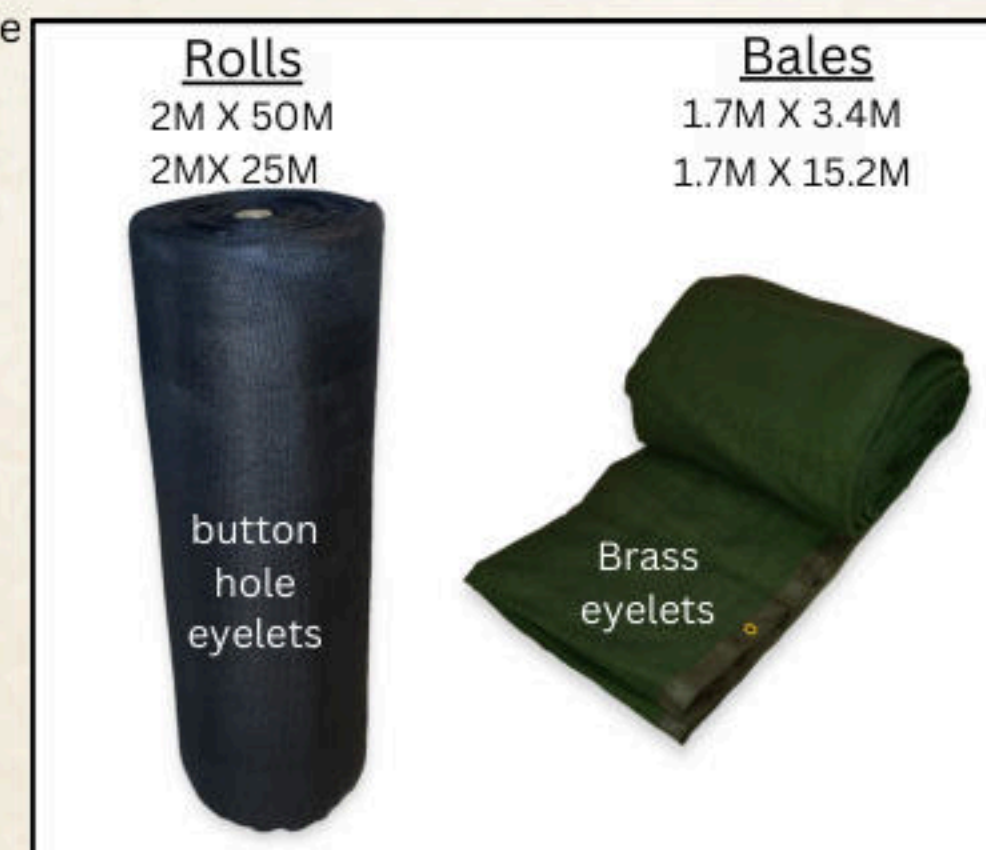

Tarpaflex privacy netting is fabricated from 170gsm UV protected knitted high density polyethylene (HDPE), providing up to 88% blockage (dependent on ambient lighting conditions) while still allowing optimised airflow.

Privacy nets are suitable for use as a fence screen, and are great for domestic and commercial applications where privacy, shade and protection are a requirement. Also great as a windbreak.

On sizes 1.7mx3.4m and 1.7mx15.2m brass eyelets are at 60cm intervals in reinforced nylon hems, enabling the user to easily and securely fix the netting to fencing or other structures. (Please note these sizes are supplied flat-packed).

Also available in 2 roll options - 2m x 25m and 2m x 50m. Please note that the rolls are manufactured in the same way as our existing privacy net panels, but without hems and brass eyelets. Instead the rolls have button hole eyelets running throughout the length.

- Manufactured to 170gsm (grams per square metre)
- Fabricated from UV protected knitted HDPE
- Usage: fencing, partitioning, gardens, events, privacy, windbreak
- Available in 2 panel sizes - 1.7m x 3.4m and 1.7m x 15.2m. These have hems and brass eyelets every 60cm
- Also available in a roll, 2m x 25m or 2m x 50m. The roll comes without hems, and has button hole eyelets
- Colour: black or green

Please note: The privacy netting shown in this image has been folded over, resulting in a doubled layer. This has been done for photographic purposes and may make the netting appear less transparent than a single layer in normal use.

SCAFFOLD SHEETING

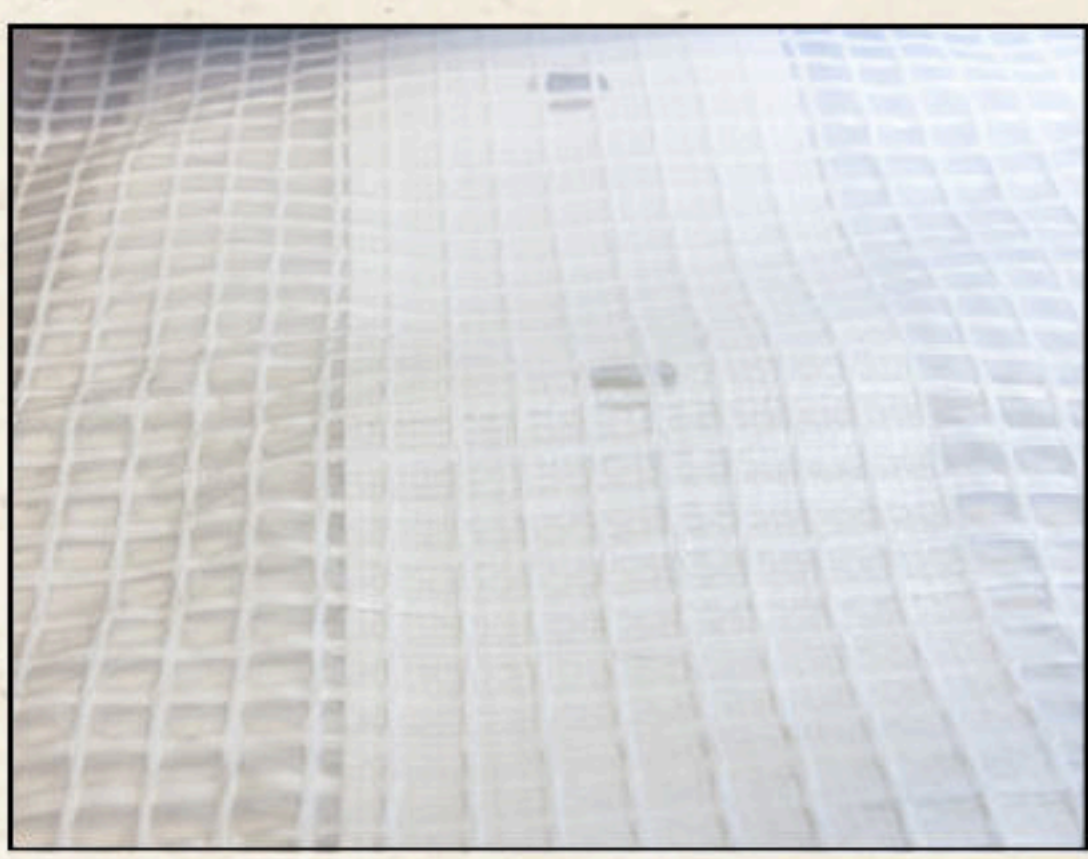

SCAN TO ORDER

Our Clear Scaffold Sheeting provides weather protection on scaffold systems. Made from strong, reinforced polyethylene at 170 gsm, scaffold sheeting helps contain debris and waste whilst providing shelter for workers from the elements. The sheeting is waterproof and UV-stabilised.

Scaffold Sheeting allows approx 70% light transmission and has 3 bands (2m width roll) or 4 bands (3m width roll) of reinforced polyethylene webbing running the length of the roll. Within this reinforced banding are perforated 15mm diameter outline holes, to aid the fixing of the sheeting to the scaffolding. For ease of use we strongly advise the use of our [Shock Cords](#) for securing the sheeting in place. If you are joining two rolls together, overlap the ends of both and push ties through both sheets. Regular inspections should be made to ensure secure and safe fastening.

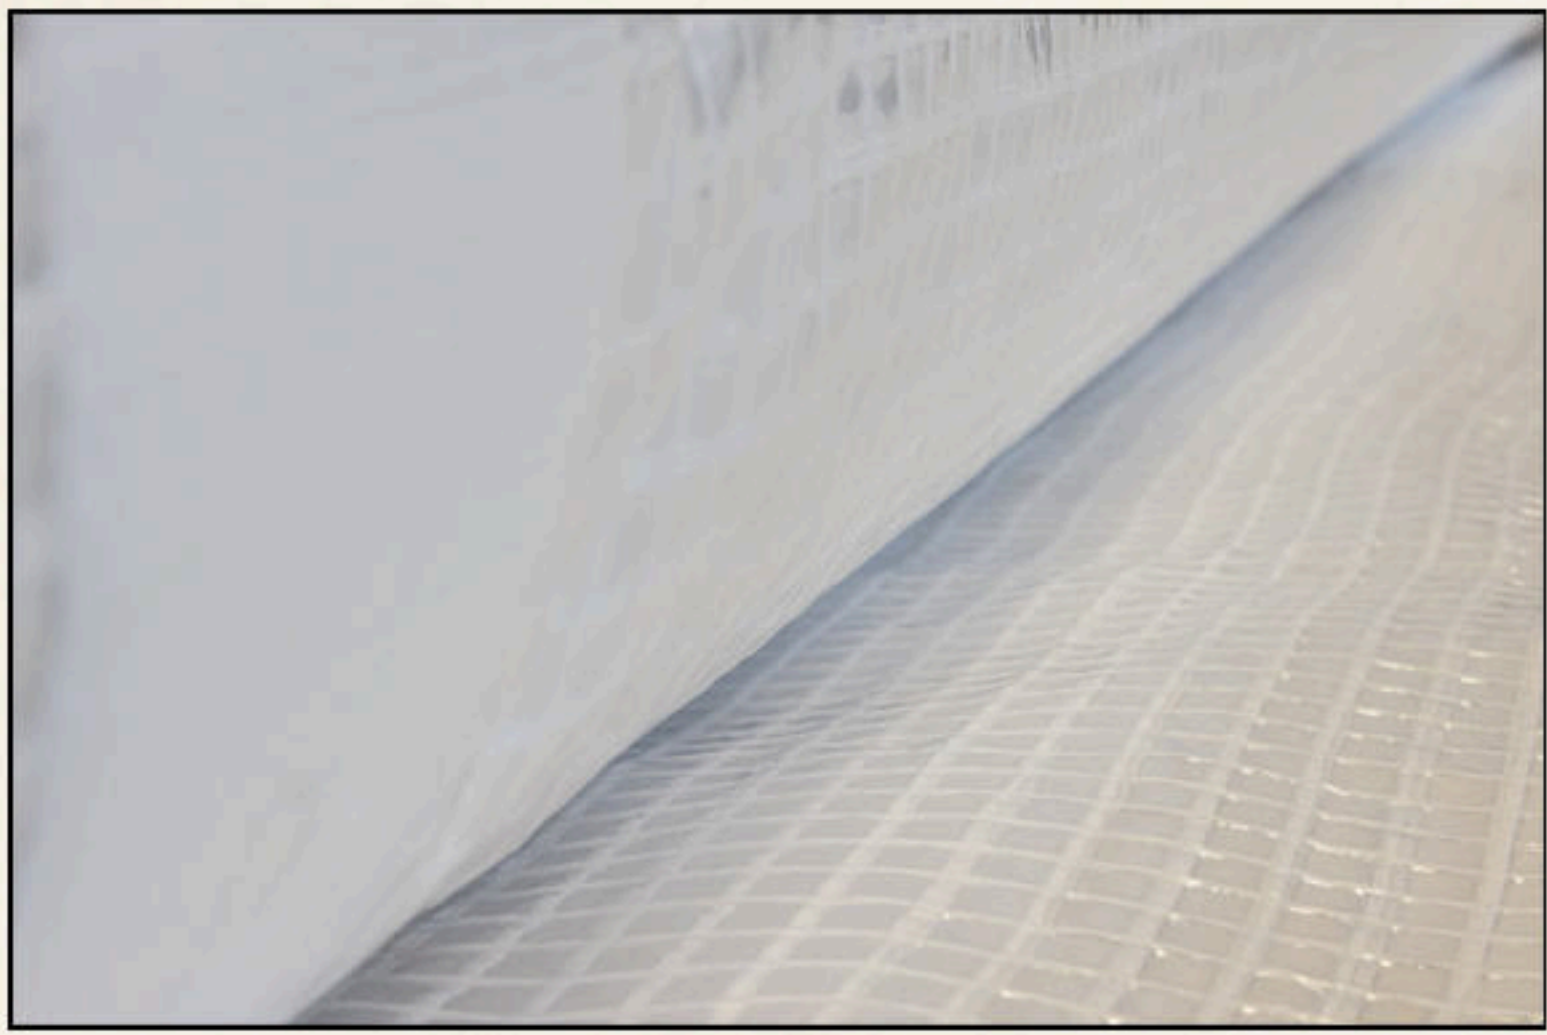

- 170gsm
- 15mm diameter outline holes spaced at 10cm intervals
- Allows approx 70% light transmission
- Also popular for use as Polytunnel Sheeting
- Colour Supplied : Clear
- Size : 2m x 45 or 3m x 45m

You may also be interested: [Debris Netting](#) on **page 23 & 24**.

ONE TONNE & BULK BAGS

One Tonne Bags are also known as builders bags, dumpy bags, FIBCs (flexible intermediate bulk containers) and bulk bags. This versatile product is traditionally associated with the construction industry for the storage and transportation of sand and aggregate.

One Tonne Bags are also used in the farming sector for the carriage of fertiliser, waste and agricultural products. You could even use an FIBC in the home, and especially in the garden for recycling and garden waste.

Available in two sizes, we offer a mini bulk bag at 50cm x 50cm x 50cm, and a standard size : 86cm x 86cm x 86cm, with a 5:1 safety factor rating. This means that each bag is fully certified for a single trip at a load of 1000kgs; however you can of course then continue using them in a wide number of applications. Each dumpy bag comes with a stitched certificate.

Tarpaflex One Tonne Bags have an open top and flat bottom, reinforced stitched seams and 4 reusable lifting loops stitched onto each top corner. This makes for easy carriage with a forklift, or for use as manual handles. Easy to clean and fold away for convenient storage. **Note: our one tonne bags are supplied empty.** Available to purchase in various quantities, see our website for more information.

- Made from polypropylene
- Size : 86cm x 86cm x 86cm 130gsm Tonne Bags
- 50cm x 50cm x 50cm 130gsm Mini Bags
- Flat-bottomed
- Open-topped, with 4 lifting loops - one stitched to each corner
- 5:1 Safety rating
- Single trip use, fully certified to 1000kgs or 500kgs
- Certificate stitched to each bag

SANDBAGS

SCAN TO ORDER

Sandbags are an increasingly essential product to have in assisting flood prevention. We supply three different types of sandbag; polypropylene, hessian, and rotproof hessian, all of which are popular for weighing down road signs, tarpaulins and for packing and despatching goods.

Each sandbag is supplied empty, and comes with a tie string to seal the bag. Once filled each bag can comfortably hold 15kg. Tarpaflex Sandbags are 76cm x 33cm. Polypropylene and hessian sandbags are recommended for short term use, with hessian, or jute, being fully biodegradable as a natural plant product. For longer term applications rotproof hessian is recommended.

Hessian Sandbags

Our 100% natural Hessian Sandbags are traditionally used to assist in the prevention of flooding.

Hessian sandbags are fabricated from jute, which as a natural plant product is fully biodegradable. For longer term requirements our **rotproofed hessian bags** are recommended.

Hessian sandbags can be used to weight items down, including tarpaulins and road signs. They also have good impact-absorbing properties for use in defence, shooting range and paintballing applications.

Tarpaflex Hessian Sandbags are 76cm x 33cm, and are a natural tan in colour. Each sandbag comes empty, complete with attached string to seal the open end once the bag has been filled. It is recommended not to overfill sandbags; to fill to two-thirds is considered sufficient in order to mould the bag to a doorway or stack atop other sandbags.

Rotproof Hessian Sandbags

Rotproof Hessian Sandbags are traditionally used to assist in the prevention of flooding, and can be used with tarpaulins to help waterproof and seal sandbag barriers.

Hessian sandbags are fabricated from jute, which as a natural plant product is fully biodegradable. Our Rotproofed version has been treated with copper sulphate and will last longer in inclement weather conditions.

Each sandbag is supplied empty, complete with attached string to seal the open end once the bag has been filled.

Sandbags can also be used to weight items down, including tarpaulins. Tarpaflex Rotproof Hessian Sandbags are 76cm x 33cm, and are a dark green in colour.

Once filled, each sandbag can comfortably hold 15kg. It is recommended not to overfill sandbags; to fill to two-thirds is considered sufficient in order to mould the bag to a doorway or stack atop other sandbags.

Polypropylene Sandbags

Our polypropylene Sandbags are traditionally used to assist in the prevention of flooding. With more instances of flooding across the UK, sandbags have become a key product for homes and businesses in case the worst should happen. They can be used alongside a tarpaulin, to waterproof and seal sandbag barriers.

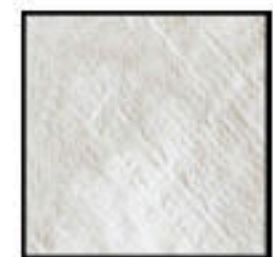

Sandbags can also be used to weight items down, including tarpaulins and road signs. Tarpaflex Sandbags are 76cm x 33cm, and are white in colour with a tie for sealing.

Each sandbag is supplied empty, complete with attached string to seal the open end once the bag has been filled. It is recommended not to overfill sandbags; to fill to two-thirds is considered sufficient in order to mould the bag to a doorway or stack atop other sandbags. Tarpaflex Sandbags will comfortably hold 15kg.

Available in packs of 10 or bales of 1000.

PALLET COVERS 140GSM

Keep the contents of your pallet protected from bad weather and dirty environments. Also great for helping to secure loads or keeping pallet contents concealed from prying eyes.

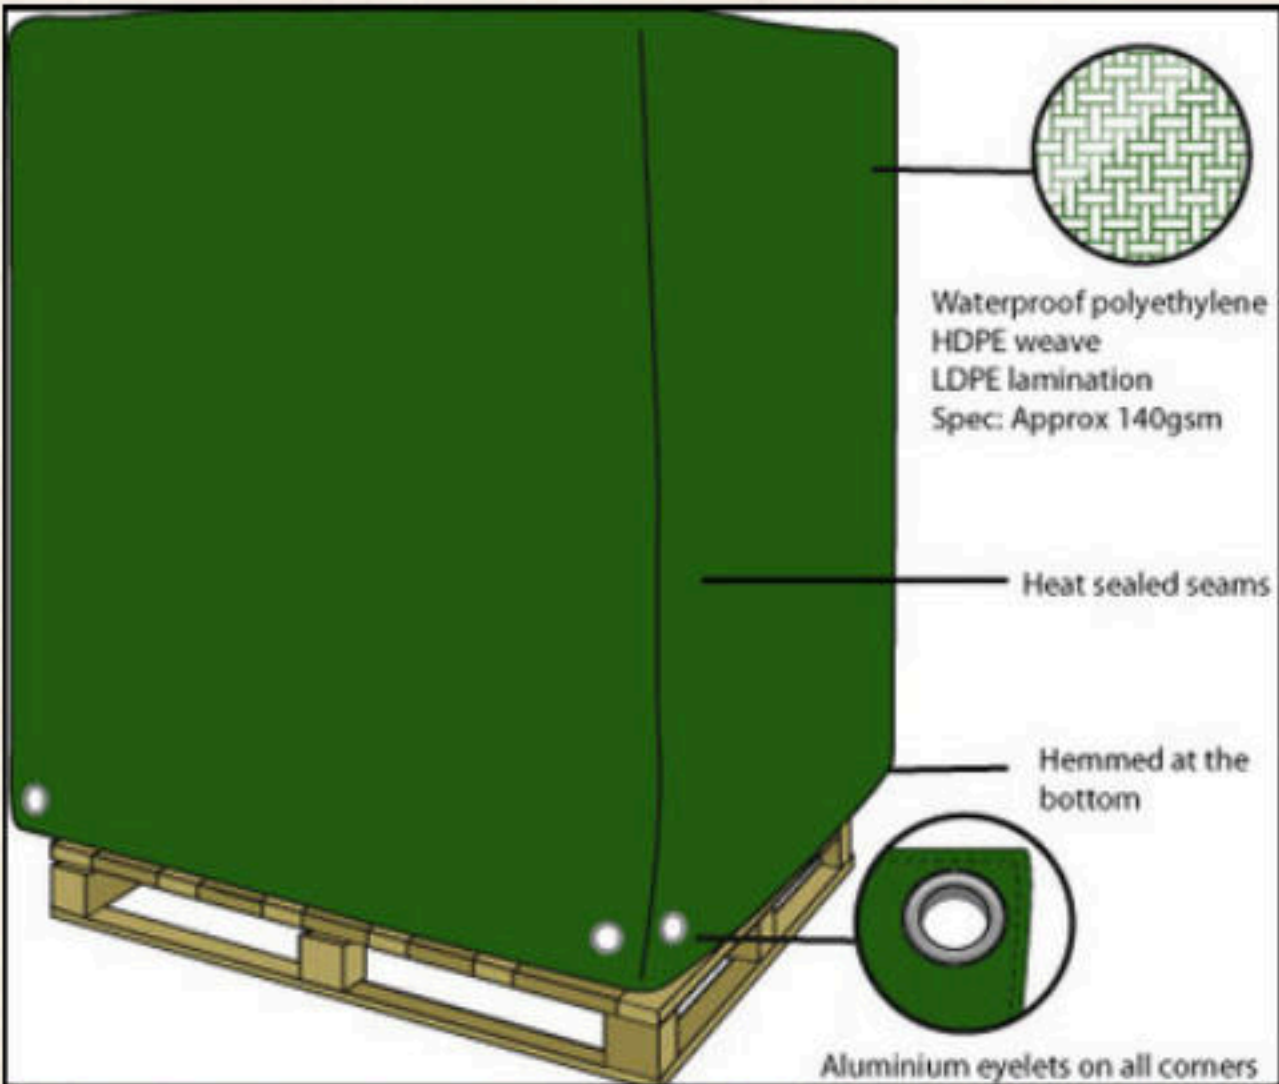

Available in both the standard UK pallet size (1000mm x 1200mm) and Euro pallet (800mm x 1200mm), we supply 4 different height options for ultimate flexibility according to your application.

We also supply an oversized pallet option, perfect for securing and storing sheets of ply and plasterboard (1200mm x 2400mm).

Tarpaflex pallet covers are weatherproof, and are fabricated from durable 140gsm woven polyethylene, which is rotproof and UV stabilised. 12mm aluminium eyelets are fitted at each corner. All seams and hems are heat sealed, to provide a snug and secure fit over your palletised goods.

Pallet covers are not a substitute for correctly securing your pallet with stretch wrap or strap. They can be used to assist with securing a load on a pallet but their prime function is to keep goods clean and dry whether pallets are being stored inside or out.

- Made from 140gsm UV-stabilised polyethylene
- Weatherproof
- Tough and rotproof
- 12mm aluminium eyelets at each corner
- Fully reusable
- Available in standard UK pallet and Euro-pallet size, plus oversized option
- Available in 4 height options

HESSIAN

SCAN TO
ORDER

Our eco-friendly 100% natural hessian rolls come in a standard 6oz specification and a heavyweight 9oz option. We offer two roll sizes in a standard 6oz spec; 137cm x 46m and 91cm x 100m; and our 9oz hessian rolls are 137cm x 46m. Also known as jute, and sometimes burlap. Tarpaflex hessian rolls are organic, and fully recyclable and biodegradable.

Ideal for frost protection in winter, hessian can be used to protect mortar and brickwork during cold spells. Its also popular for use with lime mortar, where protection against the elements is necessary to allow carbonation to take place. In the summer hessian can be wetted, to stop concrete or cement from drying too quickly.

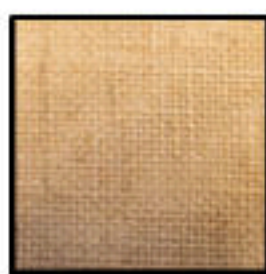

A year-round aid for gardeners, hessian offers excellent insulation for plants and shrubs over winter, protecting them from harmful effects of frost. In spring, hessian retains moisture and encourages seeds to start growing. During summer hessian provides an excellent barrier against harmful UV.

Hessian can also be used for erosion control, as well as for arts and crafts applications, at Christmas, weddings, fayres and more.

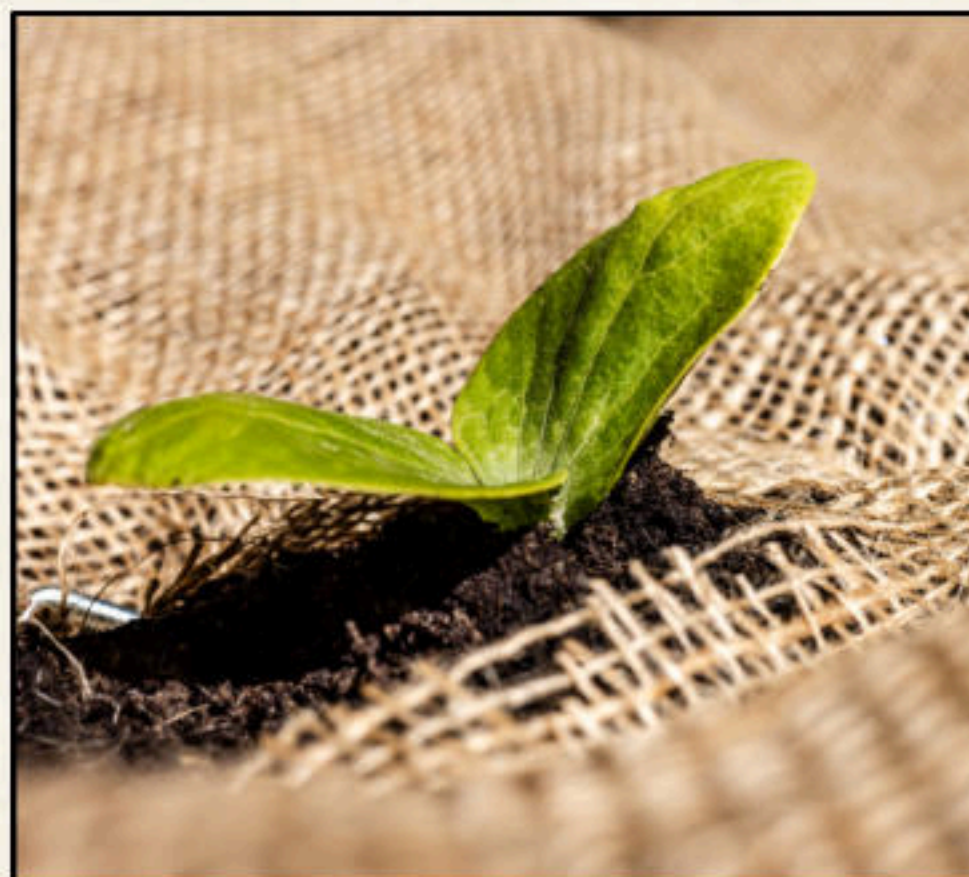

- Two specs available - 6oz and heavyweight 9oz
- Environmentally-friendly organic material, 100% recyclable and biodegradable
- Popular in the building trade, to protect mortar
- Popular in craft applications, and for decorative uses
- Popular for year-round use in the garden, to protect plants
- Can be used for erosion control
- Size : 137cm x 46m or 91cm x 100m roll (6oz) / 137cm x 46m (9oz)

POLYPROPYLENE ROPE

Our polypropylene rope is a true general purpose resource, with hundreds of uses in the home, garden, agriculture, boating or industry.

The uses are endless for polyprop' rope; most commonly used for strapping items down, lashing tarpaulins and cargo, it's also used for DIY purposes and as a draw cord for underground cabling in the telecoms industry.

Made from hard-wearing 3-strand split film polypropylene this rope is weather resistant, lightweight and easy to handle, floats, is rotproof and shrinkproof.

- Available in:
- 220m coils,
 - 500m reels
 - Handy 30m mini coils
 - In diameters of 4mm, 6mm, 8mm, 10mm, 12mm, 14mm and 16mm.

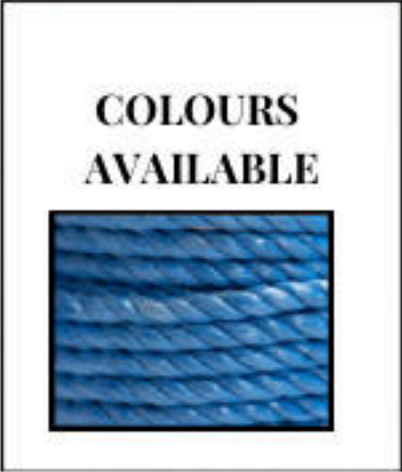

Please note: poly rope is a general purpose rope, and breaking strains are approximate and cannot be guaranteed.

BUNGEE CORD & FIXINGS

SCAN TO ORDER

Ball bungees

Ball bungees are a popular tie down to help keep your tarpaulin in a fixed position. Feed the elasticated loop through an eyelet so the ball part fits snugly against the eyelet, then use the loop to attach to a fixed point. The ball and loop on the black 20cm ball bungee is approximately 20cms long but will increase to approximately 30cms when fully stretched. The ball and loop on the white 30cm ball bungee is approximately 30cms long but will increase to approximately 45cms when fully stretched. Available in a 10 pack, 30 pack or loose in larger boxed quantities of 1000 pcs. Available in black 20 cms or white 30cms

Shock cord ties

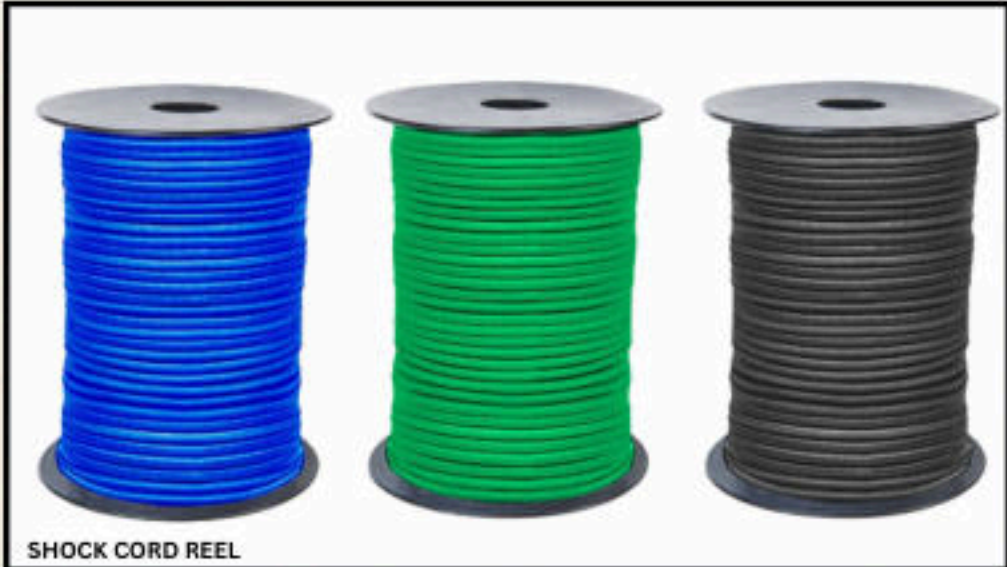

The elasticated shock cord tie is most commonly used for fixing scaffolding sheeting to scaffolding. Can also be used on tarpaulins to help tie them down. The total length of each shock cord is approx 30cm and can stretch to approx 40cms. Available in a 25 pack or 100 pack. Please note, on standard 12mm size eyelets, shock cords may not fit through the eyelet.

Shock cord with hook

Hooked Shock Cord Ties are a handy elasticated fixing option. These hook-ties are also popular for use on luggage racks, to tie down surf boards, canoes and luggage. They are UV and abrasion-resistant, colour-fast, and fitted with plastic coated movable (unfixed) metal hooks at either end.

Shock cord

Polypropylene Shock Cord Reels are available in multiple lengths and diameters. The elasticated shock cord reels can be cut to specific lengths for your convenience, and are supple and easy to use. The shape of the Shock Cord also offers excellent resistance to abrasion, providing a flexible yet durable fixing for your tarpaulin. The central core of the cord is composed of rubber while the outer braiding is a high tenacity polypropylene, with added UV protection. Shock cord, also known as bungee cord, provides a quicker and easier way to secure and unfasten tarps, and in absorbing sudden shock upon the tarpaulin, its much kinder on eyelets than a rigid product like poly rope. Designed for use with bungee cord, our range of Shock Cord Fixings are a great way of adapting tarpaulin ties to your specific application.

Autolocking hook

The Black Autlocking Hook is a 2-part accessory which can be attached to the end of our 6mm and 8mm shock cord to create a handy hook fixing.

Easy fix hook

The Large Easyfix Hook is a single piece accessory, complete with collar and brace to stop the bungee. This can be used with our 8mm and 10mm bungee.

Autolocking swivel hook

Our Autolocking Toggle is a reusable 2-part swivel fixing, designed for use with 6mm shock cord. Please note: this fixing will only fit through our larger 20mm eyelets, such as those found on the [560gsm PVC](#) range **on page 18**.

Tarp tape

Tarp Tape has been specifically designed to adhere to woven polyethylene tarpaulins, and hold fast to them in outdoor conditions. Widely used to repair rips and tears on tarps, assist with joining tarps together or to reinforce weak points, Tarp Tape is tough and hardy. It's also waterproof.

For best results, we recommend that the tape be applied on a flat, clean and dry surface, to both sides of the area. Please note: Our tarpaulin tape will only work on polyethylene tarpaulins (excluding the mono covers).

Snap 'n' tap eyelets

Additional eyelets are always recommended to supplement those already available on a tarpaulin. By creating more fixing points, any load upon the tarpaulin is spread which will mean less pressure on individual points. An easy way of customising your tarpaulin to its application, additional eyelets will help to lengthen the lifespan of your cover.

Snap 'n' Tap Eyelets are available in 12mm and 20mm diameters in various colours, and are made from tough UV stabilised polycarbonate. To use, simply pierce a hole in the material, and feed the male part through and finish with female part. Then, using an implement like a mallet, bond the eyelet tightly.

Eyelets are not guaranteed to withstand specific pressures; no claim is given to the strength eyelets will take.

Tarp grabber

Tarp Grabbers are a versatile alternative to eyelets. Grabbers are made from strong recycled material, and are up to 4 times stronger than brass eyelets. They are easy to install by piercing through the tarpaulin, and can help repair old sheets in just seconds. Eyelet diameter approx. 15mm.

Cable ties

Our black Cable Ties are strong plastic ties widely used in the home or garden. Recommended for use on debris netting, they can also be used to fix tarpaulins in place.

Each cable tie is 28cm long, and comes in a pack of 100. Cable ties cannot be reused once pulled.

Market Stall Clips

Our market stall clips are made from galvanised steel, these clips are rust-resistant, and each clip features an integrated heavy duty coil spring for strong and secure fixing. Ribbed handles make for added grip. Our clips open to 2 inches wide and are approx 15cm/ 6inches in length.

Pegs

Pack of 10 galvanised steel tent pegs, 175mm long. Widely used in camping or on groundsheets.

FREQUENTLY ASKED QUESTIONS

Please see below for responses to some of our most frequently asked questions and queries. For more information, please visit our [Tarpaulin advice page on our website](#).

Can you manufacture made to measure covers?

No. However if your requirement is on a large scale we can order particular sizes from our suppliers in the Far East. We work on a minimum 4 month lead time, and minimum quantities will apply; please contact us for details. For immediate requirements we can supply you with UK companies who specialise in bespoke covers; details will be passed on upon request.

Why is there a seam on my cover?

Most tarps need a seam as it is impossible to fabricate a tarpaulin without heat sealing several pieces of polyethylene together. A seam may not be necessary on some of the smaller sizes as they can be fabricated from one piece of material. This also applies to dust sheets where a seam is stitched.

Do you offer a guarantee to the lifespan of your tarpaulins?

No. As all of our tarpaulins are subject to varying weather conditions and put to so many different uses we cannot guarantee the length of time they will last. Generally speaking a heavier grade tarpaulin is more likely to last longer than an economy grade tarp. To maximise the lifespan of your tarpaulin we recommend to securely fasten your cover, and ensure that the sheet is not able to flap about.

Tarpaflex cannot be held responsible for damage caused by wear and tear, or degradation through UV after a prolonged period of use, please see our tarps that do have a UV warranty. Please also bear in mind that eyelets can come under a lot of pressure, and so any stress points should be reinforced. While the material a tarp is made from may be heavy duty, no such guarantee is given to the eyelets. Fixing additional eyelets can help spread the load. Please also avoid any sharp edges and constant friction which can reduce the lifespan of your cover.

What size are the eyelets? Are they on all four sides of the tarpaulin?

The standard inside diameter on the majority of our tarpaulin eyelets is approximately 12mm. However, eyelets on the Olive Green and Blue PVC 560gsm tarpaulins are currently 20mm.

Eyelets are on all 4 corners and spaced all around the hemmed edges. On a tarpaulin with riveted corner patches, you can expect the inside diameter to be approx 8mm.

Additional eyelets in both 12mm and 20mm diameters are available for purchase from our accessories section [see page 33 for information](#).

Knitted eyeholes on the debris netting are approximately 20mm wide when stretched.

The outline eyeholes on scaffold sheeting are approx 15mm in diameter.

ADDITIONAL EYELETS

Am I able to collect tarps directly from your Warehouse to save shipping costs?

Yes - we are open from **9am - 5pm Monday to Friday**. Please call before visiting to make an appointment. We do not have a shop/trade counter so, for health & safety reasons, an appointment must be made before your visit. Furthermore, we will need to check that we have the size and colour of tarpaulin you require.

Are Tarpaflex Tarpaulins guaranteed?

All our products are guaranteed to be free from defect at the time of purchase. Therefore if your tarp has a defect due to a manufacturing fault, we will replace the item free of charge. Please report any problems before using the tarpaulin. We will always request a digital photograph of the fault - this can be emailed to sales@tarpaflex.co.uk. Our warranty does not cover for usage even if eyelets or the tarpaulin rips within 24 hours of purchase caused by weather or strain applied beyond the limits of the product. We are on hand to offer advice on our products but it is the customer's responsibility to judge the suitability of the product for their requirements. Tarpaflex will not accept any responsibility for the misuse of our tarps for warranty claims. Our range of heavy weight 250,270,350 and 560gsm tarpaulins do come with warranties against UV degradation, please refer to each product for further information.

The Tarpaflex tarpaulin I received is shorter by 14cms than the size stated - please explain cut size.

Cut size is the industry's standard way to manufacture tarps. When an importer in the UK or any other part of the world purchases tarpaulins from the manufacturers in the Far East, we purchase the cloth for a tarp which is say 4m x 5m - this is the cut size. This material, being 4m x 5m, is then made into a tarpaulin. However, by making and bevelling over the hems and adding eyelets this reduces the final size of the tarp by up to 30cms, for example giving a finished size of 3m 70cms x 4m 70cms.

How do I determine the quality of a Tarpaulin purchased by weight?

Tarpaflex sells tarpaulins by weight. Poly tarps, being made from a plastic raw material, are an oil based commodity - therefore you should focus **on the weight in GSM (grams per square metre)** when purchasing any tarpaulin.

Can I order a sample before I order?

Yes, you can request a free sample on our website here by scanning the QR code. Our samples are typically 4" x 4", and are posted 1st class with Royal Mail. Just let us know which range(s) you're interested in along with your postal address, and we'll mail your samples out, free of charge.

What methods of payment do you accept?

We accept all major credit cards, **Visa, Mastercard, American Express, PayPal, Klarna** and **Google Pay**.

Do you have any promotions or voucher codes? How can I use them?

We run seasonal promotions, to include voucher codes for repeat business. Voucher codes are sent to repeat customers with their orders.

To use your voucher code, simply enter the unique code at checkout. This will automatically apply the offer to your shopping basket. Voucher codes are only valid on our website, and cannot be used in conjunction with eBay purchases.

SCAN FOR
ACCESSORIES

Do Tarpaflex Tarpaulins stand up to windy conditions? What is the best way to secure a tarpaulin?

Yes. However it is essential that the tarp is tied down properly; if it is not it may tear and the eyelets may fall out.

Tarpaflex therefore cannot be held responsible for weather related damage to tarpaulins. We always recommend using bungee cords wherever possible; these are available for purchase in the 'Accessories' section. It is also recommended to tie down the tarp with rope, by fastening rope around the item to be covered. Furthermore, eyelets are provided as an aid to securing the tarp - they are not designed to have pressure applied to them by ratchet straps or any other misuse. We strongly recommend the use of extra eyelets.

Are Tarpaflex products made from recycled material and can I recycle them after use?

All of our Polyethylene, PVC and Canvas tarpaulins and poly rope are made from 100% virgin materials rather than recycled. Our one tonne and mini one tonne builders bags are made from 30% recycled Polypropylene.

With regards to recycling, PE is not recyclable. Do not place in household kerbside recycling, as most councils cannot process this material. Please check with your local recycling centre to find out if the material can be recycled.

What does 'weathering' my canvas mean and how do I do it?

We recommend 'weathering' the canvas before first use. The tarpaulin should be thoroughly wetted with water and left to dry, in order to shrink the canvas and tighten it at any stitched points, e.g. seams and hems. Canvas can shrink by up to 4%, and so we recommend that this initial procedure is conducted before first use, both to avoid shrinkage once the tarp may have been fitted but also to stop the stitch-holes leaking.

How to get the best out of your canvas tarpaulin

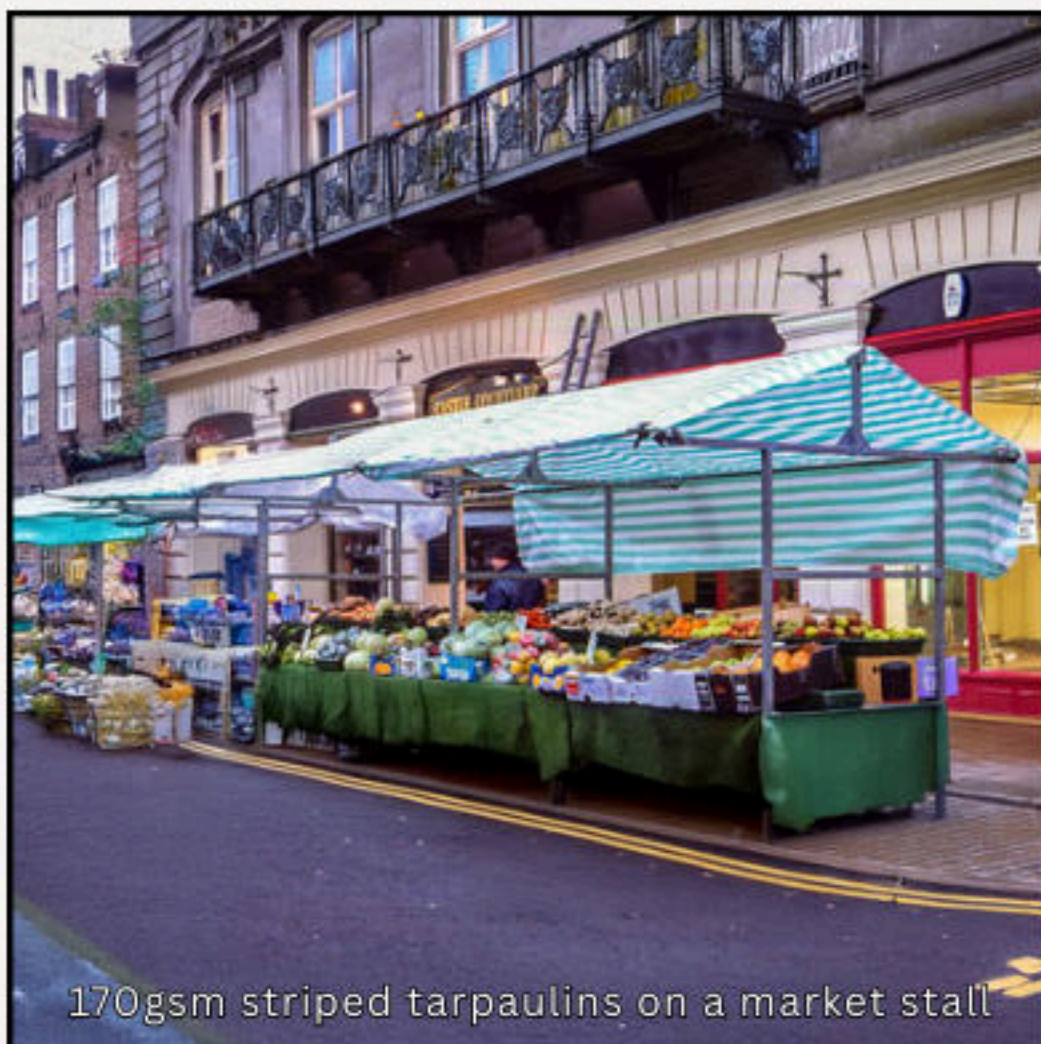

Canvas is a popular option for those requiring a traditional tarpaulin; it is aesthetically pleasing, and offers heavy-duty, reliable coverage. However there are certain points that should be borne in mind in order to ensure the best performance from your canvas tarpaulin. These factors will also help to get the maximum lifespan from your sheet.

Damage to canvas tarps generally occurs as a result of one of the following factors: moisture, incorrect storage, UV degradation, rodents, harsh cleaning and also bird droppings.

The following points should therefore be adhered to as far as is possible, in order to prevent such issues:

- if the tarpaulin is to be stored, ensure it is bone-dry; otherwise mould can grow very quickly
- remove any bird droppings or dirt before storing, to prevent any inherent acidity affecting the canvas. It may also be prudent to use rodent baits in areas where canvas is stored, to prevent pests from damaging the sheet.
- Avoid storing canvas on concrete; concrete can encourage mould growth, have an acidic effect on canvas and also lead to insect infestation.
- Do not use detergents to clean the canvas; these will break down and remove the waterproofing agent the tarp has been treated with. Similarly, do not use bleach.
- Do not use warm or hot water, or water under pressure; again these will prematurely remove the waterproofing treatment.
- Avoid using hard brushes to clean the sheet, as these are abrasive to the canvas. Where possible use a very soft-haired brush or broom to prevent damage to the material.
- Do not put strain on the eyelets. They are there for your convenience as an aid to tie down your tarp but they are not designed to take too much strain or tension. We do suggest bungee/shock cord rather than rope when using the eyelets, especially during windy conditions as some of the pressure is exerted on the elasticated cord rather than through the eyelet.

It is highly recommended to use a ridge line, or multiple ridge lines on larger sizes, made of rope or bungee which will help support the weight of the tarp. This will also help with run-off of water as water can pool if tarps are suspended only by the eyelets, adding extra pressure and weight. Use as many of the eyelets provided and install additional eyelets if required, especially if there are stress points.

The firm I always use

Don't buy tarpaulins very often, but this is the firm I always use. They have a wide range of quality products at good prices, and delivery is very prompt. Their website is most helpful, and you get the impression they know all about the things they sell.

Best around

Once again have bought a few new products from Tarpaflex and I wouldn't purchase from anyone else. I have previously bought a few heavy duty tarpaulins, canvas and pallet cover and the quality and durability is excellent.

The only place I buy my tarps

Speedy service and the only reliable, affordable supplier of the flame retardant tarps in the size I need. I don't go anywhere else.

Always best to go to a specialist supplier ...

The Tarpaflex tarpaulin we ordered is so much better than the cheap one we had before to protect the stern of our canal boat. It was simple to select from the helpful specification table and of an excellent quality. Top marks.
